Christopher Shaw, the book's author said, "Through preferential postage rates for nonprofits the Postal Service facilitates civic involvement and a healthy democracy." Nader also noted, "Postal employees are fairly remunerated in an increasingly low-wage, low benefit 'Wal-Mart' economy." According to Nader, "Post offices serve as the heart of community life in neighborhoods and towns nationwide and the presence of postal workers on community streets make them safer, as the many beneficiaries of their frequently heroic efforts attest." "The lack of citizen-consumers' involvement in the recently passed postal reform legislation has highlighted the need for a public dialogue about the future of our postal system. The book provides a starting point for that conversation," stated Nader.

Tailored to mirror the AP Statistics course, "The Practice of Statistics" became a classroom favorite. The Age of New Waves examines the origins of the concept of the "new wave" in 1950s France and the proliferation of new waves in world cinema over the past three decades. The book suggests that youth, cities, and the construction of a global market have been the catalysts for the cinematic new waves of the past half century. It begins by describing the enthusiastic engagement between French nouvelle vague filmmakers and a globalizing American cinema and culture during the modernization of France after World War II. It then charts the growing and ultimately explosive disenchantment with the aftermath of that massive social, economic, and spatial transformation in the late 1960s. Subsequent chapters focus on films and visual culture from Taiwan and contemporary mainland China during the 1980s and 1990s, and they link the recent propagation of new waves on the international film festival circuit to the "economic miracles" and consumer revolutions accompanying the process of globalization. While it travels from France to East Asia, the book follows the transnational movement of a particular model of cinema organized around *mise en scène*--or the interaction of bodies, objects, and spaces within the frame--rather than montage or narrative. The "master shot" style of directors like Hou Hsiao-Hsien, Tsai Ming-Liang, and Jia Zhangke has reinvented a crucial but overlooked tendency in new wave film, and this cinema of *mise en scène* has

become a key aesthetic strategy for representing the changing relationships between people and the material world during the rise of a global market. The final chapter considers the interaction between two of the most global phenomena in recent film history--the transnational art cinema and Hollywood--and it searches for traces of an American New Wave.

"Many well-known artists, including Thomas Eakins and Winslow Homer, and lesser-known artists like Harriet Hosmer are closely examined, as is the art world of the time. In addition to discussing the free movement of American visual culture between 'high' and 'low', Barbara Groseclose interweaves nineteenth-century art criticism with current art history, to create a fascinating insight into the changing interpretations of American art of this period."--BOOK JACKET.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.
