Whether you are puzzled about managing your electronic address book, or how to take and send a picture to a friend, you will find the information in this guide. The Internet is riddled with advanced tips and tricks, but the goal of this book is to sort through the extra information to simplify your first experience with using an Android phone or tablet. that phones can place and receive phone calls and tablets feature more screen real estate. Beyond that, both devices work identically. Indeed, the existing titles featured a lot of overlap. As with previous titles, this book covers Android technology for a beginner or anyone who uses an Android mobile device and feels that the gizmo is getting the best of them This book documents all the features of the Android phone and/or tablet, approaching them from the point of view of a smart person who is intimidated by the technology and baffled by the scant documentation and online support. All topics for the Android will be covered, from setup and configuration, to use of the phone features: texting, e-mailing, accessing the Internet, maps, navigation, camera and video, synching with a PC, and expanding the device's potential with new software. As usual, humor is generously sprinkled throughout the text. The accessible and fun writing style provides relief but never gets in the way of the book's important content. The reader will end up keeping this book close, referring to it often as they explore the features of their Android phone or tablet. It covers all the updates to the OS through the latest version release.

Michael Swanson's online discussions with literally thousands of NexStar owners made it clear that there was a desperate need for a book such as this – one that provides a complete, detailed guide to buying, using and maintaining NexStar telescopes. Although this book is highly comprehensive, it is suitable for beginners – there is a chapter on "Astronomy Basics" – and experts alike. Celestron's NexStar telescopes were introduced in 1999, beginning with their first computer controlled "go to" model, a 5-inch. More models appeared in quick succession, and Celestron's new range made it one of the two dominant manufacturers of affordable "go to" telescopes.
