The entrance of Native Americans into the world of cultural resource management is forcing a change in the traditional paradigms that have guided archaeologists, anthropologists, and other CRM professionals. This book examines these developments from tribal perspectives and articulates native views on the identification of cultural resource, how they should be handled and by whom, and what their meaning is in contemporary life. Stapp and Burney also demonstrate the connections between cultural resource and other issues such as native sovereignty, economic development, human rights, and cultural integrity.

A Cultural History of the Avant-Garde in the Nordic Countries 1900-1925 is the first publication to deal with the avant-garde in the Nordic countries at the start of the twentieth century. The essays cover a wide range of avant-garde manifestations in arts and culture: literature, the visual arts, painting as well as photography, architecture and design, film, radio, and performing arts like music, theatre and dance. It is the first major historical work to consider the Nordic avant-garde in a transnational perspective which includes all the arts and to discuss the role of the avant-garde not.

A swing in a forbidden summerhouse takes Eleanor, Edward, and Georgie on some remarkable journeys.

When Raider takes Rosie to England she finds no living kin-and long buried family secrets. When Raider offers to take Rosie to New Orleans, she sees no other option. But it is a journey that brings her closer than ever to the daring buccaneer who has captured her heart yet farther from the romantic dream that torments her. As the war rages at sea, Rosie once again watches Raider sail into battle, driven by the obsession that consumes him, and taking with him the love that has become the very soul of Rosie's life.

In this unique and highly praised book, based on Buddha's Tantric teachings, the contemporary Buddhist Master, Geshe Kelsang Gyatso, presents authentic methods for discovering this inner wealth for ourselves. Geshe Kelsang explains step-by-step how we can generate a deeply peaceful and concentrated mind by harnessing the subtle energy system within our body. With this blissful awareness we can uncover our true nature, destroy ignorance and suffering at its root, and swiftly become a source of inspiration and benefit for others.

When you think of your favorite bookstore, what comes to mind? Is it the physical space? Books stacked in rows and piled high, labeled with staff recommendations? Do you think of the owner who knows each of her customers by name and can always press into your hands the perfect book that you are sure to love? Or is it the intangible thing that draws you there: the anticipation of a new discovery, or the feeling of community or of being at home? The relationship between a writer and his or her local store can last for years or even decades. Often it is the author's local store that supported him during the early days of his career and that continues to introduce and hand-sell his work to new readers. But, as many of the authors also point out, writers are also readers and customers. For them, as for most of us, a bookstore often serves as an anchor for the community in which we all live and work -- the place that introduces us to new authors and ideas and that sets

our children on a path to becoming lifelong readers and lovers of books.

The question of authority has always been a lively issue within the Roman Catholic Church. While some have warned against the danger of democratizing the Church, others have warned against applying too narrowly the monarchical model which has been dominant in past centuries. Father McKenzie's thesis is that these political paradigms simply do not apply to the Church. The Christian community, he points out, is a unique society, and hence its understanding and use of authority must also be unique. McKenzie shows how Christian authority is unique by illuminating the understanding of authority that Jesus gave to the society which He founded. After a brilliant exposition of authority in the New Testament, the author traces how the Church has lost sight of these unique aspects, with a consequent erosion of both Christian authority and Christian freedom.

Using Asset Allocation to Reduce Risk and Boost Investing Returns Presenting a revolutionary new investment philosophy that redefines how we view sector investing, The Sector Strategist challenges long held ideas about how this unique area of finance operates. Misconceptions, such as the belief that international stocks provide diversification, are preventing investors from making the most of the opportunities for financial growth that sectors provide, and the book presents practical, applicable evidence that a better, more profitable option is available. Additionally, the book hopes to give readers an opportunity to improve returns and protect retirement assets by providing a wide range of techniques and tools designed to optimize wealth that the author has developed over the last decade. Designed to help investors avoid the often inaccurate assumptions made by "experts" which promote typical asset allocation Written by Timothy McIntosh, investment expert and founder of SIPCO/Strategic Investment Partners, whose firm's stock portfolio has earned five-star returns from Morningstar annually since 2003 Contains easy-to-apply tools for wealth protection and growth that have been proven successful during the market fluctuations of 2002 and 2008 The history and opportunities afforded by sectors have been written about at length, but no book has broken with tradition so radically, and with such success, as The Sector Strategist.

This hands-on book presents an innovative approach to guided reading that is manageable even for teachers who are new to small-group, differentiated reading instruction. --from publisher description.

"Russell's debut novel SAMHANE really packs a punch. A thrill ride of visceral horror and suspense that steadily builds to a very satisfying conclusion. The notion of matching diet with an individual's genetic makeup is transforming the way the public views nutrition as a means of managing health and preventing disease. To fulfill the promise of nutritional genomics, researchers are beginning to reconcile the diverse properties of dietary factors with our current knowledge of genome structure and g

Blake was a visionary like no other. To some, like William Wordsworth, the only explanation for the remarkable spiritual world Blake witnessed and brought to life in his books was 'insane genius'. Although such a view persisted well into the twentieth century, this is the pivotal work which challenged that perspective and changed forever our understanding of William Blake's genius, placing him in the esoteric tradition. For many this book will be a revelation; for lovers of Blake it is indispensable.

The question "Why do they hate us?" is one of the most oft-cited puzzles of contemporary American affairs, yet it's not clear to whom "they" or "us" refers, nor even what "hate" means. In this bold new work, Ella Shohat and Robert Stam take apart the "hate discourse" of right-wing politics, placing it in an international context. How, for example, do other nations love themselves, and how is that love connected to their attitudes toward America? Is love of country "monogamous" or can one love many countries? When can a country's self-love be a symptom of self-hatred? Drawing upon their extensive experience with South American, European, and Middle Eastern societies, the authors have written a long engagement with a problem that refuses to go away. Flagging Patriotism considers these complex features of "being patriotic," and in so doing insists that the idea of patriotism, instead of being rejected or embraced, be accorded the complex identity it possesses.

There has been rapid growth in biomedical engineering in recent decades, given advancements in medical imaging and

physiological modelling and sensing systems, coupled with immense growth in computational and network technology, analytic approaches, visualization and virtual-reality, man-machine interaction and automation. Biomedical engineering involves applying engineering principles to the medical and biological sciences and it comprises several topics including biomedicine, medical imaging, physiological modelling and sensing, instrumentation, real-time systems, automation and control, signal processing, image reconstruction, processing and analysis, pattern recognition, and biomechanics. It holds great promise for the diagnosis and treatment of complex medical conditions, in particular, as we can now target direct clinical applications, research and development in biomedical engineering is helping us to develop innovative implants and prosthetics, create new medical imaging technologies and improve tools and techniques for the detection, prevention and treatment of diseases. The contributing authors in this edited book present representative surveys of advances in their respective fields, focusing in particular on techniques for the analysis of complex biomedical data. The book will be a useful reference for graduate students, researchers and industrial practitioners in computer science, biomedical engineering, and computational and molecular biology.

(Berklee Guide). Play jazz piano with new facility and expression as Ray Santisi, one of the most revered educators at the Berklee College of Music and mentor to Keith Jarrett, Diana Krall, Joe Zawinul, and thousands of others reveals the pedagogy at the core of Berklee's jazz piano curriculum. From beginning through advanced levels, Berklee Jazz Piano maps the school's curriculum: a unique blend of theory and application that gives you a deep, practical understanding of how to play jazz. Concepts are illustrated on the accompanying online audio, where you'll hear how one of the great jazz pianists and educators of our time applies these concepts to both jazz standards and original compositions, and how you can do the same. You will learn: * Jazz chords and their characteristic tension substitutions, in many voicings and configurations * Modes and scales common in jazz * Techniques for comping, developing bass lines, harmonizing melodies, melodizing harmonies, and improvisation * Practice techniques for committing these concepts to your muscle memory * Variations for solo and ensemble playing * Advanced concepts, such as rhythmic displacement, approach-chord harmonization, and jazz counterpoint

LEGO Guns is packed with building instructions for five impressive looking "weapons" built entirely from LEGO TECHNIC parts. In this heavily illustrated 2-color book, you learn how to use LEGO TECHNIC pieces to build working model guns like the Warbeast, a sophisticated, fully-automatic submachine gun; Parabella, a semi-automatic pistol; Thriller, a slide action crossbow pistol with smooth cocking and chambering mechanisms; and the Magic Moth, a simple butterfly "knife" built with TECHNIC pieces. With the help of a bit of sanding, some rubber bands, and Krazy Glue, each gun actually shoots LEGO bricks at high speed, with surprising accuracy. The building instructions for each model are easy to follow and include detailed parts lists. LEGO Guns also includes sections discussing the general concepts of LEGO gun design and offers practical building tips and tricks. The models range from sophisticated to easy, and readers of all ages will find something enjoyable to build and play with.

The rationale of brain tumour surgery depends on two antagonist goals: on one hand, to optimise the quality of resection, on the other hand, to minimise the risk of permanent postoperative deficit. However, due to the physiological interindividual anatomic-functional variability, increased in cases of cerebral tumours because of the plastic potential of the brain, a study of the interactions between the lesion and the host seems mandatory - in order to understand the individual dynamic organisation of the brain, then with the goal to avoid postsurgical sequelae. In this way, new methods of functional brain mapping can be useful for the neurosurgeon. First, before surgery, non-invasive functional neuroimaging techniques (fMRI, PET, MEG) and invasive extraoperative electrical mapping (subdural grids) may allow to study the cortical organisation for each patient. Furthermore, Diffusion Tensor Imaging can help to understand the brain connectivity. Thus, the relationships between the tumour and the eloquent areas can be estimated, and these data applied to the surgical planning. Second, during surgery, direct intraoperative electrical stimulation permits to detect with accuracy and reliability, both the cortical sites and the white pathways essential for a given function, at each moment and each place of the tumour removal. Moreover, repeated stimulations all along the surgical act also allow to study the mechanisms of short-term plasticity, induced by the resection itself. This on-line mapping is used to tailor the resection according to cortico-subcortical functional boundaries. Third, postoperative neurofunctional imaging, combined to the precise evaluation of the clinical course and the objective assessment of the location and extent of resection, gives the opportunity to study the mechanisms underlying the functional compensation, i.e. the long-term plasticity. This potential may be used to perform a second surgery with a better quality of resection than the first one, thanks to possible brain remapping. Such a pre-, intra- and post-surgical longitudinal study of dynamic interactions between brain and lesion, allows to better apprehend the distinct patterns of functional redistribution for each patient, thus to apply this knowledge in order: to better select the surgical indication in brain tumours; to better inform the patient of the actual risk of transient postoperative deficit; to better plan the resection (surgical approach, cortico-subcortical boundaries); to optimise the quality of tumour removal while preserving the functional areas and tracts; and to plan a specific rehabilitation. Finally, on a fundamental point of view, the association of methods of functional

mapping in neurosurgical patients allows to better understand the pathophysiology of brain areas, their connectivity, and the mechanisms of plastic potential of the glio-neurono-synaptic networks.

Architektur im digitalen Zeitalter, eine zwei Jahrzehnte alte und wechselvolle Geschichte. Dieses Buch aus der Reihe Architectural Design (AD) beschreibt sämtliche Stufen und Phasen: von Folding zu Cyberspace, Nichtlinearität und Hypersurface-Architektur, von Versionierung zu Skripting, Emergenz, Informationsmodellen und Parametricism. Es erfasst und interpretiert den Geist der jeweiligen Zeit mit dokumentarischer Präzision, fördert und antizipiert oftmals bedeutende Entwicklungen in Architektur und Architekturtheorie. Diese Anthologie der bedeutendsten Artikel aus Architectural Design ist chronologisch und thematisch geordnet, bietet einen vollständigen historischen Zeitstrahl zu computergestütztem Design und digitalen Produktionsformen, von den Anfängen bis zur heutigen Vorrangstellung dieser Technologien. Mario Capo gibt in seiner ausführlichen Einleitung und im Vorwort zu jedem Originaltext einen scharfsinnigen Überblick über die jüngste Geschichte des digitalen Designs. Diese Synopse fehlte bislang, sowohl als pädagogisches Instrument für Studenten als auch Forschungsinstrument für Wissenschaftler. Sie spannt den Bogen zwischen dem Status quo "digitaler" Architektur und der Geschichte und Theorie jüngster Entwicklungen und Trends, stellt wichtige Fragen zu den heutigen Methoden und Techniken im professionellen Design. Eine umfassende Anthologie digitaler Architektur von Mario Carpo, einem der herausragendsten Wissenschaftler in diesem Fachgebiet. - enthält bahnbrechende Essays von Bernard Cache, Peter Eisenman, John Frazer, Charles Jencks, Greg Lynn, Achim Menges und Patrik Schumacher - stellt die wichtigsten Werke von FOA, Frank Gehry, Zaha Hadid, Ali Rahim, Lars Spuybroek/NOX, Kas Oosterhuis und ShoP vor The Public Work of Rhetoric presents the art of rhetorical techné as a contemporary praxis for civic engagement and social

change, which is necessarily inclusive of people inside and outside the academy. In this provocative call to action, editors John M. Ackerman and David J. Coogan, along with seventeen other accomplished contributors, offer case studies and criticism on the rhetorical practices of citizen-scholars pursuing democratic ideals in diverse civic communities—with partnerships across a range of media, institutions, exigencies, and discourses. Challenging conventional research methodologies and the traditional insularity of higher education, these essays argue that civic engagement as a rhetorical act requires critical attention to our notoriously veiled identity in public life, to our uneasy affiliation with democracy as a public virtue, and to the transcendent powers of discourse and ideology. This can be accomplished, the contributors argue, by building on the compatible traditions of materialist rhetoric and community literacy, two vestiges of rhetoric's dual citizenship in the fields of communication and English. This approach expresses a collective desire in rhetoric for more politically responsive scholarship, more visible impact in public life, and more access to the critical spaces between universities and their communities.

Minerva's Night Out presents series of essays by noted philosopher and motion picture and media theorist Noël Carroll that explore issues at the intersection of philosophy, motion pictures, and popular culture. Authored by one of the best known philosophers dealing with film and popular culture. Written in an accessible manner to appeal to students and scholars. Coverage ranges from the philosophy of Halloween to Vertigo and the pathologies of romantic love.

A history of Paris in twelve métro stops. Métro Stop Paris recounts the extraordinary and colorful history of the City of Light, by way of twelve Métro stops—a voyage across both space and time. At each stop a Parisian building, or street, or tomb or landmark sparks a story that holds particular significance for that area of the city. Dallas takes us to the jazz cellars and literary cafés of Montparnasse and Saint-Germain-des-Prés; the catacombs at Hell's Gate; and the Opéra during the days of Claude Debussy. A darker side of Paris emerges at the Trocadéro stop and a charitable side at the Gare du Nord, which highlights the work of Saint Vincent de Paul. Finally, our journey ends at Père-Lachaise cemetery with the little-known story of Oscar Wilde's curious involvement in the Dreyfus affair, one of France's greatest legal scandals. From Hell (the Denfert-Rochereau stop on the south side of the city) to Heaven (the Gare du Nord at the north end of Paris), Métro Stop Paris carries readers on a journey of the heart and mind. Métro Stop Paris is a thinker's guide to Paris made up of "slices of life," little vignettes drawn from Paris's two thousand years of history. Taken separately, these are charming historic tales about a city known and loved by many, but read as a whole Métro Stop Paris goes straight to the heart of what is quintessentially Parisian.

In 1995, in the first contested election in the history of the AFL-CIO, John Sweeney won the presidency of the nation's largest labor federation, promising renewal and resurgence. Today, less than 7 percent of American private-sector workers belong to a union, the lowest percentage since the beginning of the twentieth century, and public employee collective bargaining has been dealt devastating blows in Wisconsin and elsewhere. What happened? Jane McAlevey is famous—and notorious—in the American labor movement as the hard-charging organizer who racked up a string of

victories at a time when union leaders said winning wasn't possible. Then she was bounced from the movement, a victim of the high-level internecine warfare that has torn apart organized labor. In this engrossing and funny narrative—that reflects the personality of its charismatic, wisecracking author—McAlevy tells the story of a number of dramatic organizing and contract victories, and the unconventional strategies that helped achieve them. *Raising Expectations* (and *Raising Hell*) argues that labor can be revived, but only if the movement acknowledges its mistakes and fully commits to deep organizing, participatory education, militancy, and an approach to workers and their communities that more resembles the campaigns of the 1930s—in short, social movement unionism that involves raising workers' expectations (while raising hell).

This Handbook brings together scholars from around the world in addressing the global significance of, controversies over and alternatives to intellectual property (IP) today. It brings together over fifty of the leading authors in this field across the spectrum of academic disciplines, from law, economics, geography, sociology, politics and anthropology. This volume addresses the full spectrum of IP issues including copyright, patent, trademarks and trade secrets, as well as parallel rights and novel applications. In addition to addressing the role of IP in an increasingly information based and globalized economy and culture, it also challenges the utility and viability of IP today and addresses a range of alternative futures.
