Baldasserre & Bolen addresses several aspects of waterfowl ecology and management. This second edition includes 16 'infoboxes,' which are stand-alone inserts in the various chapters. The infoboxes present information on important waterfowl people, places, and issues. Modeling, simulation, and analysis (MS&A) is a crucial tool for military affairs. MS&A is one of the announced pillars of a strategy for transforming the U.S. military. Yet changes in the enterprise of MS&A have not kept pace with the new demands arising from rapid changes in DOD processes and missions or with the rapid changes in the technology available to meet those demands. To help address those concerns, DOD asked the NRC to identify shortcomings in current practice of MS&A and suggest where and how they should be resolved. This report provides an assessment of the changing mission of DOD and environment in which it must operate, an identification of high-level opportunities for MS&A research to address the expanded mission, approaches for improving the interface between MS&A practitioners and decision makers, a discussion of training and continuing education of MS&A practitioners, and an examination of the need for coordinated military science research to support MS&A.

With more than 500 species distributed all around the Northern Hemisphere, the genus *Quercus* L. is a dominant element of a wide variety of habitats including temperate, tropical, subtropical and mediterranean forests and woodlands. As the fossil record reflects, oaks were usual from the Oligocene onwards, showing the high ability of the genus to colonize new and different habitats. Such diversity and ecological amplitude makes genus *Quercus* an excellent framework for comparative ecophysiological studies, allowing the analysis of many mechanisms that are found in different oaks at different level (leaf or stem). The combination of several morphological and physiological attributes defines the existence of different functional types within the genus, which are characteristic of specific phytoclimates. From a landscape perspective, oak forests and woodlands are threatened by many factors that can compromise their future: a limited regeneration, massive decline processes, mostly triggered by adverse climatic events or the competence with other broad-leaved trees and conifer species. The knowledge of all these facts can allow for a better management of the oak forests in the future.

Examines the causes of airplane crashes, arguing that nearly all are both repetitive and unnecessary, and investigates why they continue to happen

The extensive scope of this collection means that this documentary record of the reception of German literature in England is a valuable scholarly resource. One of the most important features of British literary and intellectual history over the past 250 years is the influence of German literature. From the second half of the 18th Century, through the first decades of the 19th, German books and ideas attracted, then gained the attention of a nation. Despite the acknowledged importance of the influence on writers such as Coleridge and Carlyle the subject, though often alluded to, was rarely studied. This collection provides a guidebook through the masses of periodical and allows the English side of the Anglo-German literary relationship to be explored in detail. In order to make the collection useful to scholars with a wide range of interest, it has been divided into three parts: Part 1 is a chronological presentation of commentary on German literature in general. It also contains collective reviews of multiple German authors, notices of important anthologies and reactions to influential works about Germany and its culture. Part 2 collects reviews of 18th Century individual German authors and Part 3 is devoted to the English reception of Goethe and Schiller. Parts 2 & 3 contain cross-references to the collective reviews of Part 1. Containing over 200 British serials and articles and reviews from all the major English literary periodicals, the collection also includes a broad sampling of opinion from the more general magazines, including some popular religious publications.

A biography of the pioneering four-star general, chronicling his influence on the United States Air Force. At age 36, Laurence S. Kuter (1905–1979) became the youngest general officer since William T. Sherman. He served as deputy commander of allied tactical air forces in North Africa during World War II and helped devise the American bombing strategy in Europe. Although his combat contributions were less notable than other commanders in the Eighth Air Force, few officers saw as many theaters of operation as he did or were as highly sought-after. After World War II, he led the Military Air Transport Service, Air University, Far East Air Forces, and served as commander-in-chief of the North American Air Defense Command (NORAD). Despite these accomplishments and others, however, Kuter remains widely underappreciated. In *Architect of Air Power*, Brian D. Laslie offers the first biography of this important but unsung pioneer whose influence can be found in every stage of the development of an independent US Air Force. From his early years at West Point to his days at the Air Corps Tactical School to his leadership role at NORAD, Kuter made his mark with quiet efficiency. He was an early advocate of strategic bombardment rather than pursuit or fighter aviation?fundamentally changing the way air power was used?and later helped implement the Berlin airlift in 1948. In what would become a significant moment in military history, he wrote Field Manual 100-20, which is considered the Air Force's

“declaration of independence” from the Army. Drawing on diaries, letters, and scrapbooks, Laslie offers a complete portrait of this influential soldier. Architect of Air Power illuminates Kuter’s pivotal contributions and offers new insights into critical military policy and decision-making during the Second World War and the Cold War. Praise for Architect of Air Power “Laslie expertly brings into focus perhaps the least known of the major Air Force personalities of World War II and the early Cold War. Kuter was the indispensable “behind-the-scenes” man in those years, and this book fills a similarly indispensable gap in our understanding of the people and ideas that propelled the nation’s air arm to independence and prominence.” —Thomas Alexander Hughes, author of Over Lord: General Pete Quesada and the Triumph of Tactical Air Power in World War II “Laslie’s outstanding work on Laurence Kuter is the first full and highly effective look at this exceptionally important airman. It gives the reader ample evidence of Kuter’s central role in making America the quintessential airpower nation during the course of the twentieth century. This will be the book on Kuter for many years to come.” —Robert S. Ehlers, Jr., author of The Mediterranean Air War: Airpower and Allied Victory in World War II
