When the naked, mutilated body of a man is found in a Notting Hill graveyard and the police investigation led by Detective Chief Inspector Grant Foster and his colleague Detective Superintendent Heather Jenkins yields few results, a closer look at the corpse reveals that what looked at first glance like superficial knife wounds on the victim's chest is actually a string of carved letters and numbers, an index number referring to a file in city archives containing birth and death certificates and marriage licenses. Family historian Nigel Barnes is put on the case. As one after another victim is found in various locations all over London, each with a different mutilation but the same index number carved into their skin, Barnes and the police work frantically to figure out how the corresponding files are connected. With no clues to be found in the present, Barnes must now search the archives of the past to solve the mystery behind a string of 100-year-old murders. Only then will it be possible to stop the present series of gruesome killings, but will they be able to do so before the killer ensnares his next victim? Barnes, Foster, and Jenkins enter a race against time – and before the end of the investigation, one of them will get much too close for comfort.

A history of the Korean War with soldier's-eye views from both sides, by the Pulitzer Prize-winning author

of *The Rising Sun and Infamy*. Pulitzer Prize-winning author John Toland reports on the Korean War in a revolutionary way in this thoroughly researched and riveting book. Toland pored over military archives and was the first person to gain access to previously undisclosed Chinese records, which allowed him to investigate Chairman Mao's direct involvement in the conflict. Toland supplements his captivating history with in-depth interviews with more than two hundred American soldiers, as well as North Korean, South Korean, and Chinese combatants, plus dozens of poignant photographs, bringing those who fought to vivid life and honoring the memory of those lost. *Mortal Combat* is comprehensive in its discussion of events deemed controversial, such as American brutality against Korean civilians and allegations of American use of biological warfare. Toland tells the dramatic account of the Korean War from start to finish, from the appalling experience of its POWs to Mao's prediction of MacArthur's Inchon invasion. Toland's account of the "forgotten war" is a must-read for any history aficionado.

During more than 30 years, as a collaborator with American, European and Latin American electronics magazines (\*), has published a large assortment of practical circuits using common parts. In 1999 he

included the first selection in a volume published by Prompt Publications in USA. The idea was to proceed with the series, publishing many volumes more. But, Prompt closed his activities and the idea was forgotten although the first volume became a best seller. Now with his own publishing house (NCB Publications) the author returned with the idea of make many volumes more of the series. So, the second volume is here proceeding with the same idea: give simple projects to the experimenters who want learn electronics using common parts and with no need of special knowledge about electronics. So, as in the first volume, many of the projects collected by the author are included in this volume, most of which you can build in one evening. The projects range from fun types through practical types to amusement types. Of course, there are other devices that can be used to teach you something about circuits and components. An important feature of these projects are the ideas to Explore, intended for students looking for projects in science or to use in practical research. This ideal can be complemented by our book Science Fair and Technology Education Projects, also published in English by the author. We can consider this book as a source book of the easiest and fun-to-make of hundreds of projects created and published by the author during his life. (see more about Newton C.
