This introduction to Atomic and Molecular Physics explains how our present model of atoms and molecules has been developed during the last two centuries by many experimental discoveries and from the theoretical side by the introduction of quantum physics to the adequate description of micro-particles. It illustrates the wave model of particles by many examples and shows the limits of classical description. The interaction of electromagnetic radiation with atoms and molecules and its potential for spectroscopy is outlined in more detail and in particular lasers as modern spectroscopic tools are discussed more thoroughly. Many examples and problems with solutions should induce the reader to an intense active cooperation.

The Student Solutions Manual to accompany Physics 11E contains the complete solutions to those Problems in the text that are marked with an "SSM" icon. There are about 600 Problems, and they are found at the end of each chapter in the text. Step by step solutions are provided, and most are comprised of two parts, a REASONING part, followed by a SOLUTION part. The REASONING part explains

what motivates the authors' procedure for solving the problem, before any algebraic or numerical work is done. During the SOLUTION part, numerical calculations are performed, and the answer to the problem is obtained.
