The book provides a critical and integrative analysis of value as it pertains to different aspects of creative and cultural

industries. The notion of 'value' – a frequently used but rarely considered term – is deconstructed and considered as a spatial and structural impact, an active resource and process, and as soft institutions and embodied forms which collectively create a space through which value is constructed and negotiated. This book consists of three main sections: normative valuation, value and transformation from interactions and process, and embodied value. Together the contributions assess what value means in the creative and cultural industries, how it is constructed and added through process, and the way in which it is embodied in people and shaped through and by social space. Especially relevant for postgraduate study and research in the creative and cultural industries where critical studies are key, this book is also relevant for multiple disciplines which occupy the creative and cultural fields.
