The traces of God can be found in the most unexpected places--an Atlanta slum, a pod of whales off the coast of Alaska, the prisons of Peru and Chile, the plays of Shakespeare, a health club in Chicago--yet many Christians have not only missed seeing God, they've overlooked opportunities to make him visible to those most in need of hope. In this enlightening book author Philip Yancey serves as an insightful tour guide for those willing to look beyond the obvious, pointing out glimpses of the eternal where few might think to look. Whether finding God among the newspaper headlines, within the church, or on the job, Yancey delves deeply into the commonplace and surfaces with rich spiritual insight. Finding God in Unexpected Places takes readers from Ground Zero to the Horn of Africa, and each stop along the way reveals footprints of God, touches of his truth and grace that prompt readers to search deeper within their own lives for glimpses of transcendence.

Biopolymers from Renewable Resources is a compilation of information on the diverse and useful polymers derived from agricultural, animal, and microbial sources. The volume provides insight into the diversity of polymers obtained directly from, or derived from, renewable resources. The beneficial aspects of utilizing polymers from renewable resources, when considering synthesis, processing, disposal, biodegradability, and overall material life-cycle issues, suggests that this will continue to be an important and growing area of interest. The individual chapters provide information on synthesis, processing and properties for a variety of polyamides, polysaccharides, polyesters and polyphenols. The reader will have a single

volume that provides a resource from which to gain initial insights into this diverse field and from which key references and contacts can be drawn. Aspects of biology, biotechnology, polymer synthesis, polymer processing and engineering, mechanical properties and biophysics are addressed to varying degrees for the specific biopolymers. The volume can be used as a reference book or as a teaching text. At the more practical level, the range of important materials derived from renewable resources is both extensive and impressive. Gels, additives, fibers, coatings and films are generated from a variety of the biopolymers reviewed in this volume. These polymers are used in commodity materials in our everyday lives, as well as in specialty products.

For seventeen years, Elaine served her master, Satan, with total commitment. Then she met Dr. Rebecca Brown, who served her master, Jesus Christ, with equal commitment. Elaine, one of the top witches in the U.S., clashed with Dr. Brown, who stood against her alone. In the titanic life-and-death struggle that followed, Dr. Brown nearly lost her life. Elaine, finding a power and love greater than anything Satan could give her, left Satan and totally committed her life to Jesus Christ. This is an honest, in-depth account of Satan's activities today. You'll see how to: Recognize and combat the many satanists who regularly infiltrate and destroy Christian churches. Recognize and combat satanic attacks. Recognize those serving Satan, and bring them to Jesus Christ.

Marketing theory is often developed in isolation not collaboration; theoretical perspectives sometimes are ignorant of the diversity of marketing practice. In "The roots and uses of marketing knowledge: a critical inquiry into the theory and practice of marketing", the author engages with the vital conversation about how marketing knowledge is created, disseminated

and consumed, looking beyond the traditional reification of practice in theory and verification of theory in practice. The ontology of this work is anchored in subjective individual meaning; the epistemological stance assumes that this meaning is socially constructed. Consequently, rich empirical data, grounded in the context of experiential evidence, is extracted from a comprehensive range of marketing constituencies: academics, practitioners, managers, consultants, authors, lecturers and students. In its examination of the polarities, hybridity and iterative flow of marketing knowledge creation and consumption, this text posits a cohesive argument for a theory/practice bipartite fusion not dichotomy, adding valuable insights into the textual, contextual and pedagogical representations of marketing knowledge. The history and future of marketing knowledge is examined with the aid of instructive illustrations and insightful first-hand experience. Drawing on extensive qualitative research from a broad range of influential producers and vital consumers, Dr. Smith presents a relevant, exciting marketing knowledge framework which will be a vital resource for academics, students and practitioners. The impact of colonial dispossession and the subsequent social and political ramifications place a unique burden on governments having to establish equitable means of addressing previous injustices. A Common Hunger considers the efforts by both of these countries to reconcile the damage left by colonial oppression, in part, looking back with a critical eye, but also pointing the way toward a solution that will satisfy the common need for human dignity. Biomaterials are produced from biological material and are used for their physical characteristics. This book looks at the range of biomaterials and their applications which range from the use of polysaccharides as thickening agents to the use of proteins as fibres and adhesives.

This bestselling textbook surveys the grand narrative of the Bible, demonstrating how the biblical story forms the foundation of a Christian worldview. The second edition has been thoroughly revised. Additional material is available online through Baker Academic's Textbook eSources, offering course help for professors and study aids for students. Resources include discussion questions, a Bible reading schedule, an adult Bible class schedule, and a course syllabus.

The book that inspired the major new motion picture Mandela: Long Walk to Freedom. Nelson Mandela is one of the great moral and political leaders of our time: an international hero whose lifelong dedication to the fight against racial oppression in South Africa won him the Nobel Peace Prize and the presidency of his country. Since his triumphant release in 1990 from more than a quarter-century of imprisonment, Mandela has been at the center of the most compelling and inspiring political drama in the world. As president of the African National Congress and head of South Africa's antiapartheid movement, he was instrumental in moving the nation toward multiracial

He is revered everywhere as a vital force in the fight for human rights and racial equality. *LONG WALK TO FREEDOM* is his moving and exhilarating autobiography, destined to take its place among the finest memoirs of history's greatest figures. Here for the first time, Nelson Rolihlahla Mandela tells the extraordinary story of his life--an epic of struggle, setback, renewed hope, and ultimate triumph.

How do you turn your struggles into strengths? Beloved Bible teacher Sheila Walsh teaches readers how the daily spiritual practices of confession, meditation on God's Word, and prayer result in fresh freedom in Christ. In her long-awaited new book, Sheila Walsh equips women with a practical method for connecting with God's strength in the midst of struggle. From daily frustrations that can feel like overwhelming obstacles to hard challenges that turn into rock-bottom crises, women will find the means to equip themselves for standing strong with God. Using the spiritual applications of confession, prayer, and meditation on Scripture to form a daily connection to Jesus, women will learn how to experience new joy as a child of God who is fully known, fully loved, and fully accepted. In *In the Middle of the Mess*, Walsh reveals the hardened defenses that kept her from allowing God into her deepest hurts and shares how entering into a safe place with God and practicing this daily connection with him have saved her from the devil's prowling attacks. Though we will never be completely "fixed" on earth, we are continually held by Jesus, whatever our

circumstances.

A Thoroughly Biblical and Compelling Case for Healing from the Best-Selling Author of A More Excellent Way Over thirty years ago, Dr. Henry Wright experienced major success in praying for people to be healed from disease. But suddenly the healing stopped. He began asking God why people weren't being healed. Through a pursuit of God's Word and truth, he began a lifelong journey of learning the spiritual roots of disease and blockages to healing. In this journey, he discovered that about 80 percent of all disease has a spiritual root issue and is a direct result of a breakdown in our relationship with God, ourselves, or others. Dr. Wright began teaching the biblical principles and truths he discovered and found great success in people's healing and recovery. He has helped tens of thousands to experience wholeness in their lives. Every human being is a spirit with a soul living in a body. Therefore, this is not just about our physical health, although it greatly impacts our bodily well-being. It is about our identity in God and the freedom He desires to give us, extending from our spirits to our souls and bodies. In this book, Dr. Wright presents a thoroughly biblical and compelling case for healing. If you think you've read all you need to know about healing, it's time to take another look! The author clearly shows that disease is not a random occurrence and that science and medicine have their limitations in dealing with the spiritual roots of illnesses that inflict millions. We need healing for spirit, soul, and body. If you have recently been diagnosed with an illness or have been struggling with

Biofilms are ubiquitous and their presence in industry can lead to production losses. However, nowhere do biofilms impact human health and welfare as much as those that are found contaminating the healthcare environment, surgical instruments, equipment, and medical implantable devices. Approximately 70% of healthcare-associated infections are due to biofilm formation, resulting in increased patient morbidity and mortality. Biofilms formed on medical implants are recalcitrant to antibiotic treatment, which leaves implant removal as the principal treatment option. In this book, we investigate the role of biofilms in breast and dental implant disease and cancer. We include in vitro models for investigating treatment of chronic wounds and disinfectant action against *Candida* sp. Also included are papers on the most recent strategies for

Recent developments of experimental techniques in cellular and molecular biology have made it possible to understand the molecular biology of male gametogenesis in greater detail. This book focuses on the description of specialized proteins, which are dominantly and/or specifically expressed in germ cells and localized in spermatozoa. There is an urgent need to classify proteins of spermatogenic cells with a view of their functions, and their applications in the regulation of fertility and in understanding infertility. The understanding of structural properties of male germ cell specific proteins can offer vulnerable points for targeted intervention in testis without generalized effects on stages of

spermatogenesis. Besides targeted action in male germ cells, sperm specific proteins and polypeptides may also offer potential application in the development of a contraceptive vaccine. Researchers in the fields of biochemistry, cell biology, molecular biology, reproductive biology and proteomics will find this book of interest. "This book is far superior to any previous book on the subject. I recommend this book with great enthusiasm." Pawan K. Singal St. Boniface General Hospital Research Center

The conference on 'Interdisciplinary Research in Technology and Management' was a bold experiment in deviating from the traditional approach of conferences which focus on a specific topic or theme. By attempting to bring diverse inter-related topics on a common platform, the conference has sought to answer a long felt need and give a fillip to interdisciplinary research not only within the technology domain but across domains in the management field as well. The spectrum of topics covered in the research papers is too wide to be singled out for specific mention but it is noteworthy that these papers addressed many important and relevant concerns of the day.

This volume of the subcellular Biochemistry series will attempt to bridge the gap between the subcellular events that are related to aging as they were described in the first volume of this set of two books and the reality of aging as this is seen in clinical practice. All chapters will start from the biochemistry or cell biology, where the data is available and work up towards the understanding that we have of aging in the various areas that are related to the subject. Key focus points for this volume are nutrition, external factors and genetics on aging. There will also be chapters that will focus on various organs or tissues in which aging has been well studied, like the eyes, the muscles, the immune system and the bones. The aim of the book project and the book project that is published in concert with this volume is to bring the subcellular and clinical areas into closer contact.

This work brings together a wealth of data regarding the reference values and factors of variation in biochemical parameters used by camel veterinarians and scientists to determine these animals' nutritional and clinical status. It also explores several technical aspects involved in determining these parameters, sampling procedures, and essential elements in the interpretation of the results. Though many texts are available on small and large ruminants, much less is known about species confined to the marginal zones of tropical and Mediterranean countries, such as camels. This book addresses precisely this research gap, on the one hand by presenting an extensive review of the literature, and on the other by synthesizing the outcomes of the authors' numerous previous works. In veterinary medicine, blood tests to help diagnose diseases in cattle were first proposed nearly a century ago, but were mainly developed in the 1960s, initially at specialized research or veterinary services laboratories, and eventually, with the advent of new equipment and the miniaturization of the analyzers, finding their way into veterinarians' cabinets. Beyond their diagnostic value, veterinary surgeons and zootechnicians also speculated on the potential use of blood tests to evaluate animals' nutritional status. Thus, a whole range of analyses are now proposed to the stakeholders responsible for animal health. Such analyses could help to define a metabolic

profile, which would offer a valuable decision-making tool for experts and researchers alike.

One man hears God speak in a burning bush. God calls another man in his sleep. The angel of the Lord appears to a young man. In the Bible there are a number of people who heard God speaking directly to them. Today, however, life is so busy and full of noise that people don't hear God's voice so clearly anymore. But just because we don't hear God's voice, doesn't mean that He isn't speaking to us. HEARING GOD'S VOICE is written specifically for people who struggle to identify God's voice. In her simple narrative style, Elza Meyer uses the stories of Samuel, David, Deborah and Gideon, among others, to show that God speaks to all of us – we just need to listen. She explains how one should react to prophetic words as well as how to hear God's voice in nature. HEARING GOD'S VOICE will draw readers closer to God so that they can communicate with Him on a more intimate level.

This book provides an overview of the state of the art in research on and treatment of gambling disorder. chapters of this book present detailed information on the general concept of addiction as applied to gambling, the clinical characteristics, epidemiology and comorbidities of gambling disorder, as well as typical cognitive distortions found in patients with gambling disorder. In addition, the book includes chapters discussing animal models and the genetic and neurobiological underpinnings of the disorder. Further, it is examining treatment options including pharmacological and psychological intervention methods, as well as innovative new treatment approaches. The book also discusses relevant similarities to and differences with substance-related disorders and other behavioral addictions. Lastly, it examines gambling behavior from a cultural perspective, considers possible prevention strategies and outlines future perspectives in the field.

'...it should be made standard reading for those dealing with disaster/survival situations, it is also very informative in helping the general reader understand the psychology of survivors...The text makes compulsive reading and the book is hard to put down. It is worth examining, no matter where your professional interest lies.'- Duncan MacPaul, *Nursing Times*. Why do so many people die without need? How can an exceptional few survive extraordinarily harsh

conditions sometimes after months or years of deprivation? Recent years have seen remarkable improvements in survival training and technology, yet most people still perish quickly in the face of adversity. In this book John Leach seeks to answer these questions by considering the psychology of human survival; how groups and individuals behave before, during and after life threatening events. Both short and long-term survival are addressed as well as the psychological consequences of hunger, thirst, cold, heat, crowding, isolation, fatigue and sleep deprivation. The essence of this work is distilled into a set of principles for psychological first-aid for use in the field.

Dietary Reference Intakes for Water, Potassium, Sodium, Chloride, and Sulfate
The Dietary Reference Intakes (DRIs) are quantitative estimates of nutrient intakes to be used for planning and assessing diets for healthy people. This new report, the sixth in a series of reports presenting dietary reference values for the intakes of nutrients by Americans and Canadians, establishes nutrient recommendations on water, potassium, and salt for health maintenance and the reduction of chronic disease risk. Dietary Reference Intakes for Water, Potassium, Sodium, Chloride, and Sulfate discusses in detail the role of water, potassium, salt, chloride, and sulfate in human physiology and health. The major findings in this book include the establishment of Adequate Intakes for total water

(drinking water, beverages, and food), potassium, sodium, and chloride and the establishment of Tolerable Upper Intake levels for sodium and chloride. The book makes research recommendations for information needed to advance the understanding of human requirements for water and electrolytes, as well as adverse effects associated with the intake of excessive amounts of water, sodium, chloride, potassium, and sulfate. This book will be an invaluable reference for nutritionists, nutrition researchers, and food manufacturers.

Issues Around Aligning Theory, Research and Practice in Social Work Education provides a reflection on social work education with a slant towards an Afrocentric approach, aiming to facilitate strong reflective thinking and to address local realities about social work education on the African continent as well as in broader global contexts. This volume focuses on issues around aligning theory, research and practice in social work education. A significant contribution is made here to the scholarly understanding of opportunities to sustain the academic discourse on social work education. Social work as a profession and a social science discipline is dynamic, and it ought to meet the challenges of the realities of the societies in which it serves, given the history of the changing society of South Africa from apartheid to democracy. Over the years, social work education and training has undergone tremendous curricular changes with the enactment of

the White Paper for Social Welfare and the national review, respectively, by the South African Council for Social Services Professions (SACSSP) and the Council on Higher Education (CHE) for the re-accreditation of all Bachelor of Social Work (BSW) programmes in South Africa fulfilling the prescripts of the Higher Education Act (No. 101 of 1997, as amended) and Social Service Professions Act (No. 110 of 1978). It is worth mentioning that the curricular changes will also continue with the current reviewing of Social Service Professions Act (No. 110 of 1978), as amended, which is underway in South Africa. This book is really ground-breaking! The Afrocentric perspective on social work practice contributes to the current discourse on decolonisation of social work teaching and practice. From a methodological perspective, the book is premised on multi-, inter- and trans-disciplining in social sciences. It covers aspects of social work education and practice through research (narrative, qualitative, African methodology, secondary data analysis, etc.), engendering values and ethics, report writing, supervision in fieldwork as well as exchange programmes and international service-learning, addressing a number of concepts such as cultural competency, cultural awareness and sensitivity are addressed.

In this book social responsive theological research converges to provide practical theological and ecclesiological perspectives on the growing human dilemma of displacement. The book presents the research of practical theologians, a

missiologist and a religious practitioner whose work pertains first and foremost to the (South) African context. The different fields of expertise of the contributors within the broader field of practical theology worked towards a unique compilation of themes, each relevant to the issue at stake. The majority of chapters are theoretically orientated, except where authors refer to empirical work conducted during previous research. The main contribution of this collaborative work is to be sought in the practical theological and ecclesiological perspectives it provides. It engages the critical questions of what kind of church we need, and what kind of care we should provide in the face of the growing predicament of human displacement. The theological and theoretical principles uncovered in the different chapters will be of use to theologians from all theological subdisciplines, as well as to religious practitioners and leaders of faith communities that are challenged with the growing realities of strangers on their doorsteps and in their pews.

Our responses to our thermal environment have a considerable effect on our performance and behavior, not least in the realm of work. There has been considerable scientific investigation of these responses and formal methods have been developed for environmental evaluation and design. In recent years these have been developed to the extent that detailed national and international

standards of practice have now become feasible. This new edition of Ken Parson's definitive text brings us back up to date. He covers hot, moderate and cold environments, and defines these in terms of six basic parameters: air temperature, radiate temperature, humidity, air velocity, clothing worn, and the person's activity. There is a focus on the principles and practice of human response, which incorporates psychology, physiology and environmental physics with applied ergonomics. Water requirements, computer modeling and computer-aided design are brought in, as are current standards. Special populations, such as the aged or disabled and specialist environments such as those found in vehicles are also considered. This book continues to be the standard text for the design of environments for humans to live and work safely, comfortably and effectively, and for the design of materials which help the same people cope with their environments.

In this book, the promovendus investigates the critical role a preacher and his/her homilies have in bringing transformation, development and healing in the human society. The investigation shows how a preacher has been sidelined on issues of progress, when from time immemorial he/she has been a critical and pivotal component in the phenomenon. The study is an attempt to reclaim a preacher's role in bringing progress and healing in underdeveloped communities through homilies, particularly, in Venda, rural South Africa. This book proposes a preacher as the transformer, developer and healer of the people.

Scientists within the field of plant biotechnology are in a constant search for techniques that can, in the simplest manner possible, answer the genetic and biochemical questions that underlie developmental processes. *Thin Cell Layer Culture System* not only takes an in-depth look at a technique that has had so much success in attempting, through various practical models and systems, to answer these issues, but also represents a celebration of almost 30 years of research that has covered a massive scope of plant species and areas of study. The initial studies conducted on tobacco thin cell layers (TCLs) - proving that organogenesis can be

strictly controlled in vitro - allowed plant research to benefit from this finding, expanding this knowledge in a practical and applied manner into the biotechnological fields of tissue culture and micropropagation, cell and organ genetics and biochemistry. The chapters in this book tell the enigmatic tale of TCLs. An historical perspective opens the scene for an inquiry into the possible cellular, biochemical and genetic processes that allow for the controlled development of a TCL into any organ type. The success of the system is further demonstrated in both monocotyledonous and dicotyledonous species, covering successful organogenesis and in vitro flowering in species within ornamental, leguminous and wood crops, cereals and grasses. Methodologies are outlined in detail, as is the rationale behind the TCL-organogenesis-developmental sequel. The TCL method, shown to be superior to many conventional micropropagation systems, has also shown to be vital in the recovery of transgenic plants. This book is an essential part of every plant, cell and developmental biologist, geneticist and tissue culturalist's shelf as it addresses the primary issue of any plant: the cell, the tissue, and their subsequent development into a highly organized system.

This is a scholarly book that commemorates the legacy of Rev. Nicholas Bhekinkosi Hepworth Bhengu who was born on 05 September 1909 at eNtumeni, KwaZulu-Natal, South Africa. He was the founder of the Back to God Crusade in the 1950s that has become institutionalised within the Assemblies of God. He taught his church to be self-sustaining and also encouraged material independence through hard work. He died on 07 October 1985 at Groote Schuur Hospital in Cape Town, Western Cape, South Africa, leaving many people in Africa influenced by his rich legacy as an evangelist, pastor, teacher and church planter to this day. Bhengu combined evangelism with development, which was critical for the black people who were under a repressive regime in South Africa and in sub-Saharan Africa. He was a religious revolutionary who 'planted' more than 2000 churches in South Africa and neighbouring countries by emphasising non-denominationalism without pressurising converts to discard their churches and join others. He was determined to build a movement that would be a vehicle to reach out to the continent of Africa through his churches. The book aims at providing academics and researchers with reference material of interactions between spirituality, church dynamics, socio-economic development and political environment. Its contribution to existing research with regard to the formative growth of Christianity in Africa is significant and innovative. The book's target audience includes academics in the religious fields of missiology, church history and contextual theology, specifically researchers with intent to write scientific commentaries on the life history of Bhengu.
