This textbook presents the essential tools and core concepts of data science to public officials, policy analysts, and economists among others in order to further their application in the public sector. An expansion of the quantitative economics frameworks presented in policy and business schools, this book emphasizes the process of asking relevant questions to inform public policy. Its techniques and approaches emphasize data-driven practices, beginning with the basic programming paradigms that occupy the majority of an analysts time and advancing to the practical applications of statistical learning and machine learning. The text considers two divergent, competing perspectives to support its applications, incorporating techniques from both causal inference and prediction. Additionally, the book includes open-sourced data as well as live code, written in R and presented in notebook form, which readers can use and modify to practice working with data.

The experience of actual clients and users of the Ten Steps provide real examples of outputs for the steps plus highlighted, sidebar case studies called Ten Steps in Action. This book uses projects as the vehicle for data quality work and the word broadly to include: 1) focused data quality improvement projects, such as improving data used in supply chain management, 2) data quality activities in other projects such as building new applications and migrating data from legacy systems, integrating data because of mergers and acquisitions, or untangling data due to organizational breakups, and 3) ad hoc use of data quality steps, techniques, or activities in the course of daily work. The Ten Steps approach can also be used to enrich an organization's standard SDLC (whether sequential or Agile) and it complements general improvement methodologies such as six sigma or lean. No two data quality projects are the same but the flexible nature of the Ten Steps means the methodology can be applied to all. The new Second Edition highlights topics such as artificial intelligence and machine learning, Internet of Things, security and privacy, analytics, legal and regulatory requirements, data science, big data, data lakes, and cloud computing, among others, to show their dependence on data and information and why data quality is more relevant and critical now than ever before. The allegory of the cave by Plato is the genre of this book. Plato claims that knowledge gained through the senses is no more than opinion and in order to have real knowledge we must gain it through philosophical reasoning. A journey through this book is intended to create a lasting influence in the lives of people through creating values. I believe that enlightenment is possible only through awareness and through a mind shift. This work brings value to your life which is Christ-centered, innovative, motivational and empowering and it is a journey towards light. There are many people who journey with me in this process of healing, recovery and restoration from a labor trafficking situation. I truly believe no one can be a slave until and unless one gives up ones willpower and ones own desire to be set free. Cavenomics is an attempt to enlighten your mind, your spirit, your soul and your being. Liberation, freedom, recovery and restoration is possible. Cavenomics is the mantra for success.

We selected 36 papers for the long presentation track and 34 papers for the short presentation tracks. This volume contains revised versions of papers accepted for the long presentation track. We would like to note that getting accepted to both tracks was an achievement to be proud of, given the competitive nature of WISA this year. Papers in the short presentation track were only published in the WISA preproceedings as preliminary notes; extended versions of these notes may be published by future conferences or workshops.

One sunny day, Alice enters the apartment and finds two of the band members shot dead.
