This volume, including sixteen contributions, analyses ancient and medieval theories of intentionality in various contexts: perception, imagination, and intellectual thinking. It sheds new light on classical theories (e.g. by Aristotle and Thomas Aquinas) and examines neglected sources, both Greek and Latin.

Medieval culture is marked by a general acceptance of the mental attitude which both recognized and accepted the truths of the dominant religion. This situation is, then, the general paradigm that programmatically directs the paths and results of intellectual activity in the Middle Ages. In the various fields of scientific research, in the different epochs and in the manifold social and institutional situations, there are also produced--based on the general paradigm--many particular paradigms, which carry out some specified and graduated effects of the general one. The idea pursued during the Congress is an attempt to determine, describe and evaluate the general and particular results the paradigm had on the maturation of medieval philosophical and scientific thought with regard to the relationship--that was a dynamic and reciprocal one, and was not necessarily reduced to a theological understanding--between rational inquiry and religious belief. Described as the most "conspicuous voice in Italian poetry after Eugenio Montale," Mario Luzi created for himself an unmistakably individual rhythm, idiom, and ethos ... Particular to Luzi's poetry is the quality of lyricism, and tone of conversational intimacy, of which For the Baptism of Our Fragments represents the crowing achievement of a long poetic career which began with his first book of poems in 1935.

This examination of the implications and regulation of autonomous weapons systems combines contributions from law, robotics and philosophy.

If you choose to share 'the facts of life' with children at a young age, this is the perfect book to do so. It gently guides the reader through each stage of a child's development within the womb with charming illustrations and simple explanations, inviting lots of discussion and providing answers to all those questions. Shortlisted for the Junior Science Book Award (now the Royal Society's Science Prize).

This book is an honor to the many important contributions of Herbert Krugman, past president of APA, The Division of Consumer Psychology and The Association for Public Opinions Research. This reader contains his selected works in Consumer Behavior and Advertising which combine insights from Cognitive Psychology, Social Psychology and Survey Methodology. William Wells, University of Minnesota, has provided the foreword and section overviews for the book which will help it appeal to all academics and students of consumer research.

The Routledge Encyclopedia of Interpreting Studies is the authoritative reference for anyone with an academic or professional interest in interpreting. Drawing on the expertise of an international team of specialist contributors, this single-volume reference presents the state of the art in interpreting studies in a much more fine-grained matrix of entries than has ever been seen before. For the first time all key issues and concepts in interpreting studies are brought together and covered systematically and in a structured and accessible format. With all entries alphabetically arranged, extensively cross-referenced and including suggestions for further reading, this text combines clarity with scholarly accuracy and depth, defining and discussing key terms in context to ensure maximum understanding and ease of use. Practical and unique, this Encyclopedia of Interpreting Studies presents a genuinely comprehensive overview of the fast growing and increasingly diverse field of interpreting studies.

In the wake of a chilling attack, an ordinary man decides to take revenge. When his wife and daughter are attacked in their home, Paul Benjamin is enjoying a three-martini lunch. A professional man, soft around the middle, Paul lives happily isolated from the rougher side of New York City. As he nurses his gin headache, a call comes from his son-in-law asking him to come to the hospital. In a few hours, his world will collapse around him. As Paul slurped down his lunchtime gin, drug addicts broke into his cozy Upper West Side apartment. For a handful of money, they savagely beat Paul's wife and daughter, leaving his wife dead and his daughter comatose. After his shock wears off, and Paul realizes the police department is helpless, his thoughts turn to revenge - not just for him, but for every decent family broken by the dark forces of society.

Python for Everybody is designed to introduce students to programming and software development through the lens of exploring data. You can think of the Python programming language as your tool to solve data problems that are beyond the capability of a spreadsheet. Python is an easy to use and easy to learn programming language that is freely available on Macintosh, Windows, or Linux computers. So once you learn Python you can use it for the rest of your career without needing to purchase any software. This book uses the Python 3 language. The earlier Python 2 version of this book is titled "Python for Informatics: Exploring Information". There are free downloadable electronic copies of this book in various formats and supporting materials for the book at [www.pythonlearn.com](http://www.pythonlearn.com). The course materials are available to you under a Creative Commons License so you can adapt them to teach your own Python course.

There are some fields near Manchester, well known to the inhabitants as "Green Heys Fields," through which runs a public footpath to a little village about two miles distant. In spite of these fields being flat and low, nay, in spite of the want of wood (the great and usual recommendation of level tracts of land), there is a charm about them which strikes even the inhabitant of a mountainous district, who sees and feels the effect of contrast in these common-place but thoroughly rural fields, with the busy, bustling manufacturing town he left but half-an-hour ago. Here and there an old black and white farm-house, with its rambling outbuildings, speaks of other times and other occupations than those which now absorb the population of the neighbourhood. Here in their seasons may be seen the country business of hay-making, ploughing, &c., which are such pleasant mysteries for townspeople to watch; and here the artisan, deafened with noise of tongues and engines, may come to listen awhile to the delicious sounds of rural life: the lowing of cattle, the milk-maids' call, the clatter and cackle of poultry in the old farm-yards.

A striking first novel about the dark side of the American Dream Suzy Park is a twenty-nine-year-old Korean American interpreter for the New York City court system. Young, attractive, and achingly alone, she makes a startling and ominous discovery during one court case that forever alters her family's history. Five years prior, her parents--hardworking greengrocers who forfeited personal happiness for their children's gain--were brutally murdered in an apparent robbery of their fruit and vegetable stand. Or so Suzy believed. But the glint of a new lead entices Suzy into the dangerous Korean underworld, and ultimately reveals the mystery of her parents' homicide. An auspicious debut about the myth of the model Asian citizen, The Interpreter traverses the distance between old worlds and new, poverty and privilege, language and understanding.

Alison and her resident gumshoe ghost are on their next case when the deceased Scott MacFarlane floats in worried that he accidentally killed a prominent local woman. Turns out she's still alive...that is, of course, until she's murdered-in Alison's house. Now, between the demands of her guests and the arrival of a reality television crew, Alison must find the killer before she sees reality from the other side.

The conflict and dissociation between the Body and the Mind have determinant implications in the context of our current clinical practice, and are an important source of internal and relational disturbances. Body-Mind Dissociation in Psychoanalysis proposes the concept as a new hypothesis, different from traumatic dissociation or states of splitting. This approach opens the door to a clinical confrontation with extreme forms of mental disturbance, such as psychosis or borderline disorders, and strengthens the relational power of the analytic encounter, through a focus on the internal sensory/emotional axis in both analyst and analysand. The book details this importance of the analyst's intrasubjective relationship with the analysand in constructing new developmental horizons, starting from the body-mind exchange of the two participants. Body-Mind Dissociation in Psychoanalysis will be of use to students, beginners in psychotherapy, mental health practitioners and seasoned psychoanalysts.

Python for Software Design is a concise introduction to software design using the Python programming language. The focus is on the programming process, with special emphasis on debugging. The book includes a wide range of exercises, from short examples to substantial projects, so that students have ample opportunity to practice each new concept.

The Encyclopedia of Italian Literary Studies is a two-volume reference book containing some 600 entries on all aspects of Italian literary culture. It includes analytical essays on authors and works, from the most important figures of Italian literature to little known authors and works that are influential to the field. The Encyclopedia is distinguished by substantial articles on critics, themes, genres, schools, historical surveys, and other topics related to the overall subject of Italian literary studies. The Encyclopedia also includes writers and subjects of contemporary interest, such as those relating to journalism, film, media, children's literature, food and vernacular literatures. Entries consist of an essay on the topic and a bibliographic portion listing works for further reading, and, in the case of entries on individuals, a brief biographical paragraph and list of works by the person. It will be useful to people without specialized knowledge of Italian literature as well as to scholars.

Rufus has translated Merini's Italian poetry into English, into a bilingual edition of the original poems on one side, the translations on the opposite page. Alda is a prolific poet, recognised by Italians at large, and nominated as a candidate for the Nobel Prize.

A San Francisco Chronicle Lit Pick "Much of the book is astonishingly funny; the rest would break your heart." —Colm Tóibín Anne Enright is one of the most acclaimed novelists of her generation. The Gathering won the 2007 Man Booker Prize, and her follow-up novel, The Forgotten Waltz, garnered universal praise for her luminous language and deep insight into relationships. Now, in Making Babies, Enright offers a new kind of memoir: an unapologetic look at the very personal experience of becoming a mother. With a refreshing no-nonsense attitude, Enright opens up about the birth and first two years of her children's lives. Enright was married for eighteen years before she and her husband Martin, a playwright, decided to have children. Already a confident, successful writer, Enright continued to work in her native Ireland after each of her two babies was born. While each baby slept, those first two years of life, Enright wrote, in dispatches, about the mess, the glory, and the raw shock of motherhood. Here, unfiltered and irreverent, are Enright's keen reactions to the pains of pregnancy, the joys of breast milk, and the all-too-common pressures to be the "perfect" parent. Supremely observant and endlessly quizzical, Enright is never saccharine, always witty, but also deeply loving. Already a bestseller in the UK, Making Babies brings Enright's autobiographical writing to American readers for the first time. Tender and candid, it captures beautifully just what it's like for a working woman to become a mother. The result is a moving chronicle of parenthood from one of the most distinctive and gifted authors writing today.

European Contract Law in the Digital Age offers an overview of the interactions between digital technologies and contract law and takes into account the two (late) 2015 EU Commission proposals on digital contracting and digital content. The book goes beyond these proposals and is grouped around the three pillars of an architecture of contract law in the digital age: the regulatory framework; digital interventions over the life-cycle of the contract; and digital objects of contracting. The discussion of the regulatory framework looks at the platforms used for digital contracting - such as Airbnb - which are particularly important instruments for the formation of digital contracts. In describing the life-cycle of the contract, this book shows how four key technologies (digital platforms, Big Data analytics, artificial intelligence, and blockchain) are being used at different stages of the contractual process, from the screening for contractual partners to formation, enforcement and interpretation. Furthermore, digitally facilitated contracting increasingly relates to digital content - for instance software or search engines - as the object of the contract but while this area has notably been shaped by the proposed Directive on Contracts for the Supply of Digital Content, this work shows that important questions remain unanswered. This book highlights how the digital dimension opens a new chapter in the concept of contracting, both questioning and revisiting many of its core concepts. It is a reliable resource on topical developments for everyone interested in digital technologies and contract law. (Series: European Contract Law and Theory, Vol. 3) [Subject: European Law, Contract Law, Digital Content Law]

Psychoanalysis of the Psychoses brings together a distinguished international set of contributors, offering a range of views and approaches, to explore the latest thinking in the psychoanalytic treatment of psychosis and related disorders. Drawing on findings from neuroscience, theory and clinical material from many schools of psychoanalytic thought, this book offers a comprehensive guide to understanding how psychosis is conceptualised from a psychoanalytic perspective. It looks at how to work with psychotic patients, typical problems in treating psychosis and the role of pharmacology. It demonstrates the relational dimension, capable of strengthening the patient's observing Ego and facilitating the integration of the different areas of the personality. This process can identify and work through the main psychological stress factors involved in psychotic disturbances, transforming chaotic thoughts into springboards for

important insights, and offering patients the precious chance to construct for the first time a creative relationship with their own existence. Psychoanalysis of the Psychoses will be of great interest to psychoanalysts and psychoanalytic psychotherapists as well as psychiatrists wishing to draw upon psychoanalytic ideas in their work.

Using a comparative perspective, this volume studies the court as a crucial center of government and politics, as well as the dominant focus for the ruling elites. The essays explore how the early modern court gradually developed from the medieval royal household to its very different form in the sixteenth and seventeenth centuries. Comparing England, Germany, France, Spain as well as the Netherlands and Italy, the editors find that several common themes emerge: the problem of integrating a number of often vastly different provinces and principalities through the attraction of a court; the capital city's function as the basis of the court and as its rival; the role of the Court during the great religious conflicts of the sixteenth and seventeenth centuries; and the court as an instrument for domesticating the nobility and a stronghold of aristocratic influence.

In contemporary psychoanalysis, a key concept and aim of clinical practice is to distinguish the boundaries of any mental state. Without this boundary-setting, the patient has nothing but the 'formless infinite' of primitive mental states. *Formless Infinity: Clinical Explorations of Matte Blanco and Bion* draws on the work of these two authors to explore how analysts can work with patients to reveal, understand and ultimately contain their primitive mental states. Riccardo Lombardi discusses the core concepts of the unconscious, the role of the body in analysis, time and death. He displays the clinical implications of Matte Blanco's theoretical extension of Freud's theory of the unconscious, presenting numerous clinical examples of working with psychosis and other severe pathologies. *Formless Infinity*, a stimulating teaching text for students, trainers and seasoned mental health practitioners, is essential reading for psychoanalysts and psychoanalytic psychotherapists. It is particularly recommended to analysts interested in widening the scope of the analytic practice by exploring the functioning of the deep unconscious, primitive mental states, psychosomatic pathologies and psychotic conditions.

*Physiognomy, the history of racial classifications, and the interplay between natural philosophy, medicine, and ethics* The idea of the body as a mirror of the soul has fascinated mankind throughout history. Being able to see through an individual, and drawing conclusions on their character solely based on a selection of external features, is the subject of physiognomy, and has a long tradition running well into recent times. However, the pre-modern, especially medieval background of this discipline has remained underexplored.

The selected case studies in this volume each contribute to a better understanding of the history of physiognomy from antiquity to the Renaissance, and offer discussions on unedited treatises and on the application, development, and reception of this field of knowledge, as well as on visual sources inspired by physiognomic theory. Contributors: Enikő Békés (Hungarian Academy of Sciences), Joël Biard (University of Tours), Lisa Devriese (KU Leuven), Maria Fernanda Ferrini (University of Macerata), Christophe Grellard (École Pratique des Hautes Études), Luís Campos Ribeiro (University of Lisbon), Maria Michela Sassi (University of Pisa), Oleg Voskoboynikov (Higher School of Economics Moscow), Steven J. Williams (New Mexico Highlands University), Joseph Ziegler (University of Haifa), Gabriella Zuccolin (University of Pavia)

"Painters and humanists were joint pace-makers for the early Italian Renaissance: this was recognized even at the time. But how much the painters' visual art had in common with the humanists' verbal art is still not clear. This book - acclaimed on its first publication as 'almost beyond value in its appeal to the mind' - examines the one firm bridge between them, what Petrarch and other humanists wrote about painting. It makes a survey of the range and main themes of their art criticism. It describes how incessant analysis of their own medium, neo-classical language, also conditioned their own insights into painting. Finally, it explains in detail the genesis of one humanist invention still with us - the notion that a picture has a 'composition.'" -- Cover page 4.

*Space Atlas* combines updated maps, lavish photographs, and elegant illustrations to chart the solar system, the universe, and beyond. For space enthusiasts, science lovers, and star gazers, here is the newly revised edition of National Geographic's enduring guide to space, with a new introduction by American hero Buzz Aldrin. In this guided tour of our planetary neighborhood, the Milky Way and other galaxies, and beyond, detailed maps and fascinating imagery from recent space missions partner with clear, authoritative scientific information. Starting with the sun and moving outward into space, acclaimed science writer and physicist James Trefil illuminates each planet, the most important moons, significant asteroids, and other objects in our solar system. Looking beyond, he explains what we know about the Milky Way and other galaxies--and how we know it, with clear explanations of the basics of astrophysics, including dark matter and gravitational waves. For this new edition, and to celebrate the 50th anniversary of his moonwalk, astronaut and American hero Buzz Aldrin offers a new special section on Earth's moon and its essential role in space exploration past and future.

Neurotechnologies, such as functional Magnetic Resonance Imaging and Deep Brain Stimulation, are used in the health sector for research, diagnosis, and therapy. But, neurotechnologies could also be used for human enhancement, for instance, to improve cognitive functions. Moreover, insights from neuroscience are increasingly used for legal purposes, for instance, to determine a suspect's responsibility for his actions or to distinguish truthful from deceptive statements. These three domains of application raise different, important ethical and legal questions that require further discussion. Similarly, the application of robotics and autonomous technologies in various (social) situations - in the home, hospital environments, traffic, and war - raises a number of ethical and legal issues. These include questions, such as what are the ethical implications of applying robots in the health sector with regard to our ideas about human dignity and autonomy? What are the consequences of using robotics in war? And, can we hold robots liable if they play an ever more important role in our daily lives? This book, which was created in light of a conference on the topic that was held in Spring of 2011 at Tilburg University in the Netherlands, brings together 19 papers on the fascinating developments in neuroscience and robotics, and the legal, ethical, and consequences these developments may have.

For Nietzsche, the Age of Greek Tragedy was indeed a tragic age. He saw in it the rise and climax of values so dear to him that their subsequent drop into catastrophe (in the person of Socrates - Plato) was clearly foreshadowed as though these were events taking place in the theater. And so in this work, unpublished in his own day but written at the same time that his *The Birth of Tragedy* had so outraged the German professorate as to imperil his own academic career, his most deeply felt task was one of education. He wanted to present the culture of the Greeks as a paradigm to his young German contemporaries who might thus be persuaded to work toward a state of culture of their own; a state where Nietzsche found sorely missing.

This latest volume of "BACAP Proceedings" contains some innovative research by international scholars on Plato, Aristotle, and Sophocles. It covers such themes as Plato on the philosopher ruler, and Aristotle on essence and necessity in science. This publication has also been published in paperback, please click here for details.

Marias's second novel was written in the early '70s when he was 21, and it has all of the stylistic grace and wry invention that has put Maras on the Nobel shortlist. An unnamed narrator ruminates on the intentions of a man (variously called Holden Branshaw and Hordern Bragshaw) who decides not to publish a novel written by an unnamed author who died penniless pursuing the life of that novel's subject: Victor Arledge, an author who died a recluse at age 38.

The volume collects the contributions to an international conference held at the University of Frankfurt on the relationship between epistemic practices (culture of knowledge) and the concept of knowledge (ideal of knowledge) in Plato. For Plato, both aspects of knowledge were not only of equal importance, he was also well aware of their interdependence, taking into account that no philosopher has yet reached the epistemic level of knowledge. His acknowledgement of this interdependence is, as the papers of this volume show, further counter-evidence against the traditional reading that attributes to Plato a two-worlds-view which tries to keep ordinary belief and philosophical knowledge ontologically distinct. The contributions include essays from both ancient philosophers and ancient historians. Topics of the essays are e.g. the conception of education in the "Republic", the epistemic ascent in the "Symposium", the knowledge of knowledge in the "Charmides", the role of perception in the "Theaetetus" and the sophistic environment of Plato.

A gem of a Mariás story: Elvis and his entourage abandon their translator in a seedy cantina full of enraged criminals. "It all happened because of Elvis Presley." Elvis, down south of the border to film a movie, has insisted his producers hire a proper Spaniard so that he can pronounce his few lines in Spanish with a Castilian accent. But Ruibérriz has taken on much more than he bargained for. One fatal night, horseplay in a local bar goes too far: a fatuous drunken American insults the local kingpin, and when the thug insists that Ruibérriz translate, Elvis himself adds an even more stinging comment—and who must translate that?
