Sustainability in an Imaginary World explores the social agency of art and its connection to complex issues of sustainability. Over the past decade, interest in art's agency has ballooned as an increasing number of fields turn to the arts with ever-expanding expectations. Yet just as art is being heralded as a magic bullet of social change, research is beginning to throw cautionary light on such enthusiasm, challenging the linear, prescriptive, instrumental expectations such transdisciplinary interactions often imply. In this, art finds itself at a treacherous crossroads, unable to turn a deaf ear to calls for help from an increasing number of ostensibly non-aesthetic fields, yet in answering such prescriptive urgencies, jeopardizing the very power for which its help was sought in the first place. This book goes in search of a way forward, proposing a theory of art aiming to preserve the integrity of arts practices within transdisciplinary mandates. This approach is then explored through a series of case studies developed in collaboration with some of Canada's most prominent artists, including internationally renowned nature poet Don McKay; Italian composer and Head of Vancouver New Music, Giorgio Magnanesi; the renowned Electric Company Theatre, led by Kevin Kerr; and finally through a largescale multimedia installation aiming to reimagine the relationship between climate, culture, and human agency. Sustainability in an Imaginary World will be of great interest to students and scholars of arts-based research fields, sustainability studies, and environmental humanities.

Pilgrims are the heart of Medjugorje, and they often become transmitters of Our Lady's messages when they return home. Their testimonies help bring Medjugorje to those who cannot make the long journey themselves. Queen of Peace Productions and Stella Mar Films has been documenting pilgrim testimonies and presenting them as a testament to the abundant miracles and graces that people find in Medjugorje. In 2019, they created the website iMedjugorje.com to share these powerful stories with the rest of the world. This new, full-color book is a collection of testimonies and portraits from the first year of the iMedjugorje mission (2019), an endeavor which will continue into the coming years.

In this updated edition, Cathy Vatterott examines the role homework has played in the culture of schooling over the years; how such factors as family life, the media, and "homework gap" issues based on shifting demographics have affected the homework controversy; and what recent research as well as common sense tell us about the effects of homework on student learning. She also explores how the current homework debate has been reshaped by forces including the Common Core, a pervasive media and technology presence, the mass hysteria of "achievement culture," and the increasing shift to standards-based and formative assessment. The best way to address the homework controversy is not to eliminate homework. Instead, the author urges educators to replace the old paradigm (characterized by long-standing cultural beliefs, moralistic views, and behaviorist philosophy) with a new paradigm based on the following elements: Designing high-quality homework tasks; Differentiating homework tasks; Deemphasizing grading of homework; Improving homework completion; and Implementing homework support programs. Numerous examples from teachers and schools illustrate the new paradigm in action, and readers will find useful new tools to start them on their own journey. The end product is homework that works—for all students, at all levels.

This book offers a user-friendly guide to preparing a perfect dissertation. Rather than focusing only on how to draft the report itself, the authors provide readers with material on generating a researchable question, as well as methods for assessing blind spots and learning styles that may get in the way of completing a dissertation. Using examples from a wide variety of disciplines, the authors demonstrate how to write up results, develop appropriate writing skills, and ways to construct tables and figures. In addition, the book includes information on writing up qualitative research, using computer technology effectively to assist in the dissertation process and following ethical guidelines in conducting research.

This dissertation comprises three papers on the governance of corporate risk: 1. The first paper investigates the role of organizational structures aimed at monitoring corporate risk. Proponents of risk-related governance structures, such as risk committees or Enterprise Risk Management (ERM) programs, assert that risk monitoring adds value by ensuring that corporate risks are managed. An alternative view is that such governance structures are nothing more than window-dressing created in response to regulatory or public pressure. Consistent with the former view, I find that, in the period between 2000 and 2006, firms with more observable risk oversight structures exhibit lower equity and credit risk than firms with fewer or no observable risk oversight structures. I also provide evidence that firms with more observable risk oversight structures experienced higher returns during the worst days of the 2007-2008 financial crisis and were less susceptible to market fluctuations than firms with fewer or no observable risk oversight structures. Finally, I find that firms without observable risk oversight structures experienced higher abnormal returns to recent legislative events relating to risk management than firms with observable risk oversight structures. 2. The most common empirical measure of managerial risk-taking incentives is equity portfolio vega (Vega), which is measured as the dollar change in a manager's equity portfolio for a 0.01 change in the standard deviation of stock returns. However, Vega exhibits at least three undesirable features. First, Vega is expressed as a dollar change. This implicitly assumes that managers with identical Vega have the same incentives regardless of differences in their total equity and other wealth. Second, the small change in the standard deviation of returns used to calculate Vega (i.e., 0.01) yields a very local approximation of managerial risk-taking incentives. If an executive's expected payoff is highly nonlinear over the range of potential stock price and volatility outcomes, a local measure of incentives is unlikely to provide a valid assessment of managerial incentives. Third, Vega is measured as the partial derivative of the manager's equity portfolio with respect to return volatility. This computation does not consider that this partial derivative also varies with changes in stock price. The second paper develops and tests a new measure of managerial risk-taking equity incentives that adjusts for differences in managerial wealth, considers more global changes in price and volatility, and explicitly considers the impact of stock price and volatility changes. We find that our new measure exhibits higher explanatory power and is more robust to model specification than Vega for explaining a wide range of measures of risk-taking behavior. 3. The third paper examines the relation between shareholder monitoring and managerial risk-taking incentives. We develop a stylized model to show that shareholder monitoring mitigates the effect of contractual risk-taking incentives on the manager's actions. Consistent with the model, we find empirically that the positive association between the CEO's contractual risk-taking incentives and risk-taking behavior decreases with the level of shareholder monitoring. Furthermore, consistent with the board anticipating and optimally responding to shareholder monitoring, boards of firms exposed to more intense monitoring design compensation contracts that provide higher incentives to take risks. Overall, our results suggest that, when evaluating risk-taking incentives provided by a compensation contract, it is important to account for the firm's monitoring environment.

Francois Delaporte's History of Yellow Fever is a detective story whose protagonist is an idea rather than a person. Most importantly, while tracing this fascinating story, it demonstrates the practical value of an epistemological approach to the history of science. By casting the story of the conquest of yellow fever in an entirely new light, Delaporte is also able to elucidate the political uses to which that story has been put, in both Cuba and the United States. The mystery of yellow fever was unraveled in 1900 a momentous event that not only ensured the eradication of this scourge but pointed the way to the birth of a science of tropical medicine. But how was the mystery unraveled? There are two mutually antagonistic accounts, epitomized many years later in two nationalistic paintings: a Cuban painting showing Dr. Carlos Finlay presenting to the American Commission his theory that the Culex mosquito is the carrier of the yellow fever germ, and an American painting of Dr. Walter Reed's experimental proof of the manner of transmission. Delaporte shows both pictures to be false because they neglect important historical antecedents and connectives. What occurred in 1900 that is worth our attention, he observes, is not a discovery that must be credited to some national hero, but an epistemological shift, built on a foundation of much previous work and inference, that allowed scientists to conceive of the mosquito as a vector for the transmission of disease.

Death and taxes come later; what seems inevitable for children is the idea that, after spending the day at school, they must then complete more academic assignments at home. The predictable results: stress and conflict, frustration and exhaustion. Parents respond by reassuring themselves that at least the benefits outweigh the costs. But what if they don't? In The Homework Myth, nationally known educator and parenting expert Alfie Kohn systematically examines the usual defenses of homework--that it promotes higher achievement, "reinforces" learning, and teaches study skills and responsibility. None of these assumptions, he shows, actually passes the test of research, logic, or experience. So why do we continue to administer this modern cod liver oil -- or even demand a larger dose? Kohn's incisive analysis reveals how a mistrust of children, a set of misconceptions about learning, and a misguided focus on competitiveness have all left our kids with less free time and our families with more conflict. Pointing to parents who have fought back -- and schools that have proved educational excellence is possible without homework -- Kohn shows how we can rethink what happens during and after school in order to rescue our families and our children's love of learning.

Hitler and the Holocaust is the product of a lifetime's work by one of the world's foremost authorities on the history of anti-Semitism and modern Jewry. Robert S. Wistrich begins by reckoning with Europe's long history of violence against the Jews, and how that tradition manifested itself in Germany and Austria in the early twentieth century. He looks at the forces that shaped Hitler's belief in a "Jewish menace" that must be eradicated, and the process by which, once Hitler gained power, the Nazi regime tightened the noose around Germany's Jews. He deals with many crucial questions, such as when Hitler's plans for mass genocide were finalized, the relationship between the Holocaust and the larger war, and the mechanism of authority by which power--and guilt--flowed out from the Nazi inner circle to "ordinary Germans," and other Europeans. He explains the infernal workings of the death machine, the nature of Jewish and other resistance, and the sad story of collaboration and indifference across Europe and America, and in the Church. Finally, Wistrich discusses the abiding legacy of the Nazi genocide, and the lessons that must be drawn from it. A work of commanding authority and insight, Hitler and the Holocaust is an indelible contribution to the literature of history.
