Gifted students have the potential to learn material earlier and faster, to handle more complexity and abstraction, and to solve complex problems better. This potential, however, needs stimulating experiences from home and school or it will not unfold. The books in the Challenging Units for Gifted Learners series are designed to help teachers provide the stimulating curricula that will nurture this potential in school. The units presented in this series are based on research into how these students actually think differently from their peers and how they use their learning styles and potential not merely to develop intellectual expertise, but to move beyond expertise to the production of new ideas. The Social Studies book includes units that ask students to explore the struggles of America's first permanent English settlement in Jamestown, to hold an African economic summit, to study various Supreme Court cases and primary source documents, and to create a Civil War documentary that views the war from the perspective of a person living in a particular state. One of the most important 21st century skills is the ability to negotiate constructive resolutions in the face of conflicts of interest. Negotiation is a form of communication that requires more than just language ability. It requires being able to listen to, and communicate with, others within a milieu of diverse language abilities, academic, professional and cultural backgrounds in an increasingly global society. Added to this is the reality that the majority of English spoken globally is English as a Lingua Franca (ELF). Model United Nations (MUN) simulations are uniquely positioned to help students develop their language ability and their global competencies, as well as being ideal opportunities for participants to experience ELF in an intensely communicative context. A common goal in MUN simulations is to prepare students to solve complex problems that are associated with living in a technological, competitive, and globally connected world. This volume provides researchers, negotiation practitioners, and language teachers with insights and best practices in MUN event and delegate preparation. Application of these best practices will significantly enrich the pedagogic environments designed for MUN delegates, especially in ELF contexts.

Classic Books Library presents this brand new edition of the short story, "An Occurrence at Owl Creek Bridge" (1890) by Ambrose Bierce. In this text Bierce creatively uses both structure and content to explore the concept of time, from present to past, and reflecting its transitional and illusive qualities. The story is one of Bierce's most popular and acclaimed works, alongside "The Devil's Dictionary" (1911). Bierce (1842-c. 1914) was an American writer, journalist and Civil War veteran associated with the realism literary movement. His writing is noted for its cynical, brooding tones and structural precision.

ICOLD Bulletin 159, Supplement to the Position Paper on Dams and the Environment, summarizes the role of dams in the future in the context of the global environmental changes which have become a significant issue in recent years. Global problems such as climate change have impacts on dam safety. Dams can therefore be both affected by global problems and help provide solutions to these issues. And although the issue of dam safety in relation to global climate changes is very important, this topic will

be addressed by ICOLD in other publications. Since the original publication, in 1997, of the Position Paper on Dams and the Environment was published, it is gratifying to note that worldwide progress has been made in the areas of water resource development and environmental challenges. These developments at the organizational level and the cited publications are only a few examples of global advances in environmentally sound development in general, and of water resources and dam developments in particular. However, they demonstrate that by agreeing on a set of common goals and working within a sustainable framework, individual dam projects can play a significant role in improving the everyday lives of millions of people. Understanding and Evaluating Research: A Critical Guide aims to sensitize students to the necessity of learning how not to defer to the mysterious authority of the experts, but rather to learn how to be a critical consumer of others' research, and to gain confidence in their ability to be producers of research. Sue McGregor shows students how to be research literate, and how to find, critique and apply other people's scholarship. This textbook is grounded in a solid understanding of the prevailing research methodologies for creating new knowledge (philosophical underpinnings), which in turn dictate problem posing, theory selection, and research methods (tasks for sampling, collecting and analyzing data, and reporting results).

Understanding and Evaluating Research: A Critical Guide shows students how to be critical consumers of research and to appreciate the power of methodology as it shapes the research question, the use of theory in the study, the methods used, and how the outcomes are reported. The book starts with what it means to be a critical and uncritical reader of research, followed by a detailed chapter on methodology, and then proceeds to a discussion of each component of a research article as it is informed by the methodology. The book encourages readers to select an article from their discipline, learning along the way how to assess

each component of the article and come to a judgment of its rigor or quality as a scholarly report.

"Along the way, the story of Gingrich's personal and political problems and triumphs is revealed, from his controversial first divorce and scandalous ethics problems and his early campaign losses. We also see his rise to national prominence and influence, the development of "Newt, Inc." and his involvement in the "necessary revolution." Finally, by detailing Gingrich's life experiences from childhood to adulthood the nature and development of his conservatism is examined."--BOOK JACKET.

Recognizing the importance of good leadership to the achievement of educational excellence, the second edition of this handbook synthesizes a large body of school leadership literature and explores the subject from three perspectives: the person, the structure, and the skills. Part I examines characteristics of today's educational leaders; effective leadership styles and qualities; administrator training, hiring, and induction methods; and the scarcity of female and black school leaders. Part II looks at the organizational supports underlying school leadership. This section examines the balance of authority between the central office and the school site, the team approach to management, the decision-making context, and the components of school climate. Part III highlights leadership abilities needed by today's school administrators. Besides knowing how to manage the school's instructional program and staff, administrators must be able to communicate in today's more open, sharing organization; build coalitions of community groups; make meetings more productive; and manage time, stress, and conflict more effectively. Concerned about integrating theory with practice, the book offers many practical suggestions for using the information presented. Accompanying each chapter are extensive bibliographical references that appear at the end of the volume. (MLH)

In the early 1980s, a trend towards formal understanding and knowledge-based assistance for the development and maintenance of database-intensive information systems became apparent. The group of John Mylopoulos at the University of Toronto and their European collaborators moved from semantic models of information systems design (Taxis project) towards earlier stages of the software lifecycle. Joachim Schmidt's group at the University of Hamburg completed their early work on the design and implementation of database programming languages (Pascal/R) and began to consider tools for the development of large database program packages. The Belgian company BIM developed a fast commercial Prolog which turned out to be useful as an implementation language for object oriented knowledge representation schemes and as a prototyping tool for formal design models. Case studies by Vasant Dhar and Matthias Jarke in New York pointed out the need for formally representing process knowledge, and a number of projects in the US and Europe began to

consider computer assistance (CASE) as a viable approach to support software engineering. In 1985, the time appeared ripe for an attempt at integrating these experiences in a comprehensive CASE framework relating all phases of an information systems lifecycle. The Commission of the European Communities decided in early 1986 to fund this joint effort by six European software houses and research institutions in the Software Technology section of the ESPRIT I program. The project was given the number 892 and the title DAIDA - Development Assistance for Intelligent Database Applications.

This revised and enlarged edition provides a fresh look at mass communication theory and the institutions of mass communication. "Beyond Media "broadens and redefines the concept of mass communication to include all institutions which contribute to the mass production and distribution of information within society, including television, film, newspapers, books and magazines, as well as museums, libraries, popular art, politics, theater, religion and architecture. A summary of important theories and research findings in the field completes this section. Eight chapters follow which examine other major mass media institutions. Key figures from each field, Victor Danilov on museums, David Davidson on libraries, Paola Soleri on architecture, Roberta Mueller on art, Richard Rudman on politics, James Hitchcock on the church, Vincent Sardi on restaurants, and Ken Weissman and Maxine Fox on theater, discuss the roles of their respective institutions in the mass production and distribution of information.

"Fascinating.... Lays a foundation for understanding human history."—Bill Gates In this "artful, informative, and delightful" (William H. McNeill, *New York Review of Books*) book, Jared Diamond convincingly argues that geographical and environmental factors shaped the modern world. Societies that had had a head start in food production advanced beyond the hunter-gatherer stage, and then developed religion --as well as nasty germs and potent weapons of war --and adventured on sea and land to conquer and decimate preliterate cultures. A major advance in our understanding of human societies, *Guns, Germs, and Steel* chronicles the way that the modern world came to be and stunningly dismantles racially based theories of human history. Winner of the Pulitzer Prize, the Phi Beta Kappa Award in Science, the Rhone-Poulenc Prize, and the Commonwealth club of California's Gold Medal. Rev. ed. of: *Professional nursing* / Kay Kittrell Chitty, Beth Perry Black. 6th ed. c2011.

Using the historic Minnesota state government shutdown of 2011 as a backdrop, Interfaith Advocacy describes the work of the Joint Religious Legislative Coalition, an interfaith advocacy group that brings together leaders from Catholic, Protestant, Jewish, and Muslim traditions to advocate on behalf of a range of policies. As the nation's first statewide interfaith lobbying group, the story of the JRLC facilitates an examination of the role of political advocacy groups in state level American politics: what they are, how and why they form, how they mobilize citizens to participate in the political process, how they work to influence government, and what their impact is on American democracy. With research based on two years of in-depth interviews, participant observation, and analysis of archival records, this volume offers proof that it is possible to build successful long term political coalitions among improbable allies. The book investigates both the strengths and weaknesses of this model of advocacy and concludes that the presence of religious advocacy groups in the political process offers substantial benefits of representation, concern for underrepresented issues and groups, and the development of networks of social capital. Interfaith Advocacy is grounded in the theoretical literature of political science but also accessible to all readers who have an interest in political advocacy, state politics, or religion and politics.
