X. In the speech, which was delivered on April 3, 1964, at Cory Methodist Church in Cleveland, Ohio, Malcolm X advised African Americans to judiciously exercise their right to vote, but he cautioned that if the government continued to prevent African Americans from attaining full equality, it might be necessary for them to take up arms. It was ranked 7th in the top 100 American speeches of the 20th century by 137 leading scholars of American public address. "It's time for us to submerge our differences and realize that it is best for us to first see that we have the same problem, a common problem - a problem that will make you catch hell whether you're a Baptist, or a Methodist, or a Muslim, or a nationalist. Whether you're educated or illiterate, whether you live on the boulevard or in the alley, you're going to catch hell just like I am."

This report introduces two general methods of accounting-the cash basis method and accrual basis method. The choice of accounting method determines the timing of the recognition of revenue and expenses. Under cash basis accounting, revenue and expenses are recorded when cash is actually paid or received. Under accrual basis accounting, revenue is recorded when it is earned and expenses are reported when

they are incurred. Understanding the differences between these two accounting methods could be helpful to Congress as it considers reforming the tax system and changing the federal government's financial reporting requirements. Currently with certain exceptions, the Internal Revenue Code (IRC) requires some companies with gross receipts in excess of \$5 million to use accrual basis, instead of cash basis, of accounting to determine their tax liabilities. The IRC's requirement to use the accrual method, arguably, ensures that revenue and the expenses incurred to generate that revenue are realized in the same year. Types of companies that may be excepted from using accrual basis of accounting for income taxes are sole proprietors and certain qualified personal service corporations (PSCs) in such fields as health, law, engineering, accounting, performing arts, and consulting firms, as well as farms that are not corporations or do not have a corporate partner. Some Members of Congress have put forth proposals to revise the circumstances under which certain companies are able to use cash method. House Ways and Means Committee Chairman Dave Camp introduced H.R. 1, the Tax Reform Act of 2014, on December 10, 2014. Among the changes proposed in the bill is the requirement that some partnerships, S corporations, and PSCs use the accrual method instead of the cash method to determine their federal taxable liability. Specifically, these business types would be required to use the accrual method if their average annual gross receipts exceeded \$10 million. Former Senate Committee on Finance Chairman Max Baucus included a similar provision in his

The Small Business Accounting and Tax Simplification Act (H.R. 947), Start-up Jobs and Innovation Act (S. 1658), and Small Business Tax Certainty and Growth Act (S. 1085), introduced in the 113th Congress, would raise the gross receipt test limit from \$5 million to \$10 million. The President's budget is prepared primarily using cash basis. The Financial Report of the United States Government is prepared using both accrual and modified cash basis. For the past 17 years, the Government Accountability Office (GAO) has issued a disclaimer of opinion on the Financial Report of the United States Government. One of the reasons stated by GAO for the disclaimer of opinion for the 2013 financial report was that the federal government's process for preparing the consolidated financial statements was ineffective to determine whether the financial reports were presented fairly in accordance with U.S. Generally Accepted Accounting Principles (GAAP). A number of congressional proposals would change how the U.S. government's financial reports are prepared. In the 113th Congress, the GAAP Act (H.R. 476) and H.Res. 545 would require the federal government's budget, financial reports, and performance evaluation reports to be prepared using both cash and accrual method. This report introduces the difference between cash and accrual methods by providing an overview of concepts and theories that underlie these accounting methods. It then explores these concepts through the business cycle of a fictitious small business and how the basis of

This textbook, originally by D. Annand and H. Dauderis, was intended for a first course in introductory financial accounting. It focuses on core introductory financial accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).

Financial accounting is generally thought of as a very precise science. This book seeks to dispel this myth. Even absent fraudulent manipulation, information contained in financial statements can be woefully misleading and incomplete. Written primarily for non-accounting students, small business owners, and advisers to small business, the book demonstrates how accounting information contained in financial statements both informs and misinforms statement users.

Closing the Books gives you a complete understanding of how information is summarized into the financial statements, as well as the closing steps needed to create financial statements. It

This book covers the adjusting journal process of financial accounting and the creation of financial statements, the creation of financial statements being the end goal of financial accounting, the product that the financial accounting system is designed to produce. Financial statements are the primary tool decision makers use when making financial decisions. Financial statements are the preferred format for financial data to be compiled. After normal business transactions have been input into the accounting system throughout a period, an adjusting process is often needed before the data is then compiled into financial statements, the adjusting process helping to convert financial data to a more perfect accrual system. The adjusting journal entries are often one of the most difficult areas of the accounting process for learners to understand, and is one of the most important topics needed for fully grasping accrual accounting concepts. A solid understanding of the adjusting process, and the reasons for the adjusting process, provides learners the tools needed to explain the difference between a cash basis and an accrual basis of accounting and the reasons an accrual basis is the preferred format for compiling accounting data. We will start our learning of the adjusting process with a review of topics covered in prior texts, including a description of the overall financial

accounting process, and the rules for recording normal transactions. If you do not have an understanding of what financial accounting is, or how to record normal journal entries, it is recommended that you read our prior texts first, Accounting Instruction Reference # 100 and Accounting Instruction Reference # 200. We will then describe what the adjusting process, is and how to think about the adjusting process, how the adjusting process fits into the overall financial accounting process, and what makes the adjusting process different. Then we will explain the rules for adjusting journal entries, some being the same as those for all journal entries, but some differing. Next, we will discuss the adjusting process worksheet we will use in the adjusting process, and why a worksheet is needed. After that, we will list and explain the most common adjusting entries, providing practical examples for walking through the process of recording adjusting entries step by step. Finally, we will use the adjusted trial balance to construct financial statements, the balance sheet, the income statement, and the statement of owner's equity. We will demonstrate a step by step process for the creation of each financial statement, show how the financial statements are related, and explain how a trial balance, which has an equal number of debits and credits, must be convertible into financial statements that are, "in balance."
