

## Financial Accounting 9th Edition By Harrison Jr Walter T Horngren Charles T Thomas C Wi Prentice Hall2012 Hardcover 9th Edition

Financial Accounting in an Economic Context has become an important part of the curriculum in many MBA programs. Grounded in financial statements, Pratt's Financial Accounting helps students see the impact of transactions on overall business decisions. The text enables MBA students to become effective managers and decision-makers by encouraging them to develop a conceptual understanding of the impact that economic events have on a business. The newest edition on this popular text addresses topics that today's accountants and managers must consider: increased impacts of IFRS, fair value reporting, segment reporting and an earnings management framework. While addressing recent developments and maintaining the perspective of the previous editions, Financial Accounting in an Economic Context 8th Edition offers new elements designed to sharpen the text's economic decisions-making foundation. The text highlights the differences between IFRS and GAAP throughout each chapter. Each chapter closes with a "Issue for Discussion" feature, allowing students to apply data found in the financial statements of an international company. New boxed-in features illustrate the effects of accounting transitions on cash flow of statements and new end of chapter items address the cash flow effects of accounting transactions.

This text provides a contemporary introduction to accounting and accounting systems. It covers the essence of both financial and managerial accounting in a non-procedural, non-debit and credit manner. After a brief introduction to financial statement preparation, the remainder of the text focuses on controls and the use of accounting information in decision making.

With a comprehensive and accessible introduction to the subject, Financial Accounting for Decision Makers focuses on the ways in which financial statements and information can be used to improve the quality of decision making. The practical emphasis throughout the book ensures the material is always relevant, whilst the authors' style of introducing topics gradually and explaining technical terminology in a clear, friendly style caters for all students, whether on specialist accounting or non-specialist business degrees. Libby/Libby/Hodge wrote this text based on their belief that the subject of financial accounting is inherently interesting, but financial accounting textbooks are often not. They believe most financial accounting textbooks fail to demonstrate that accounting is an exciting field of study and one that is important to future careers in business. When writing this text, they considered career relevance as their guide when selecting material, and the need to engage the student as their guide to style, pedagogy, and design.

Libby/Libby/Hodge successfully implements a real-world, single focus company approach in every chapter. Students and instructors have responded very favorably to the use of focus companies and the real-world financial statements. The companies chosen are engaging and the decision-making focus shows the relevance of financial accounting regardless of whether or not the student has chosen to major in accounting. Libby/Libby/Hodge believes in the building-block approach to teaching transaction analysis. Most faculty agree that mastery of the accounting cycle is critical to success in financial accounting. And yet all other financial books introduce and develop transaction analysis in one chapter, bombarding a student early in the course with an overload of new concepts and terms. The authors believe that most faculty take more time with the accounting cycle, but other financial accounting textbooks don't. By slowing down the introduction of transactions and giving students time to practice and gain mastery, this building-block approach leads to greater student success in their study of later topics in financial accounting such as adjusting entries.

Data Analytics and Decision-Making The text provides numerous discussions on how decision-makers are increasingly relying on data analytics to make decisions using accounting information. Accounting software systems collect vast amounts of data about a company's economic events as well as its suppliers and customers. Business decision-makers take advantage of this wealth of data by using data analytics to gain insights and therefore make more informed business decisions. Data analytics involves analyzing data, often employing both software and statistics, to draw inferences. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies"--
