The global construction sector is infamous for high levels of injuries, accidents and fatalities, and poor health and well-being of its workforce. While this record appears in both developed and developing countries, the situation is worse in developing countries, where major spending on infrastructure development is expected. There is an urgent need to improve construction health and safety (H&S) in developing countries. The improvement calls for the development of context-specific solutions underpinned by research into challenges and related solutions. This edited volume advances the current understanding of construction H&S in developing countries by revealing context-specific issues and challenges that have hitherto not been well explored in the literature, and applying emergent H&S management approaches and practices in

The construction industry has a distressingly poor safety record, whether measured in absolute terms or alongside other industries. The level of construction safety in a country is influenced by factors such as variations in the labour forces, shifting economies, insurance rates, legal ramifications and the stage of technological development. Yet the problem is a world-wide one, and many of the ways of tackling it can be applied across countries. Effective tools include designing, preplanning, training, management commitment and the development of a safety culture. The introduction and operation of effective safety management systems represents a viable way forwards, but these systems are all too rarely implemented. How can this be done? Should we go back to prescriptive legislation? This book considers these questions by drawing together leading-edge research papers from the proceedings of an international conference conducted by a commission (W099) on Safety and Health on Construction Sites of CIB, the international council of building research organisations.

This volume fully covers the syllabus for the NEBOSH Certificate in Construction Safety and Health. It has been updated in line with changes in legislation regarding fire safety, noise and vibration, work at height, construction design and control of hazardous substances.

Research Paper (postgraduate) from the year 2018 in the subject Geography / Earth Science - Demographics, Urban Management, Planning, grade: 70.0, Deakin University (Education), course: Master of Construction Management Professional, language: English, abstract: The practice of Health and Safety continues to be a major challenge plaguing the construction industries of most developing countries. In Ghana, approximately 60 out of the total 900 occupational accidents recorded by the labour Department over the last decade has been fatal and consequently attributed to a poor Health and Safety practice observed on most construction sites. The aim of the study was to critically investigate the constraints and barriers faced in implementing an effective health and safety practice within the Ghanaian construction industry and also provide suitable recommendations on improving the practice. The research was purely based on a qualitative study conducted through the use of secondary data gathered from extensive literature review. The study specifically explored the standard and approved health and safety legislative frameworks adopted in most developed countries especially in the UK and Australian construction industry.

The author is one of the world's foremost experts, with nearly 35 years as a consultant specializing in safety research and hazard analysis.

Health and safety is important to everyone nowadays, especially with the burgeoning extent of legislation and regulations in the area both in UK terms but perhaps more importantly within and across the European Community. One of the industries most affected by this is the building and construction sector, which because of its traditionally poor record in this respect and its widespread and under-policed activities is now subject to the Construction, Design and Management (CDM) Regulations. These require that every project involving building or demolition work which is undertaken, regardless of the industry concerned and for what purpose, must be planned and documented according to these safety regulations and procedures. Non-compliance can attract heavy penalties, including fines and prison sentences. In addition, the possibilities of actions like this, and their contingent financial costs, are beginning to determine a whole philosophy to underpin business management. It is therefore vital to understand exactly what legal obligations and duties

Lack of knowledge of this nature can prove to be very costly, so this book will show you how to find your way around the maze of rules and regulations in order to improve your business efficiency and reduce exposure to financial risk.
