"Andrews is at her best in this thoroughly satisfying story with the right blend of mystery, romance, and sharply funny writing." --Orlando Sentinel Whether it's a mystery, sassy women's fiction, or a combination of the two, New York Times bestseller Mary Kay Andrews always gives her fans a read to remember. And now she's throwing a Hissy Fit, in the best possible sense. A delicious tale of revenge and renovation, Hissy Fit tells of a wronged spitfire who's determined to see that the no-good lowdown, lying, cheating varmint of an ex-fiancé who ruined her life and her business gets the comeuppance he so richly deserves...even as she struggles to revitalize a broken-down antebellum mansion for a hunky, if slightly odd, local businessman. If you like the novels of Fannie Flagg, Jennifer Crusie, Adriana Trigiani, and Emily Giffin, or are a devoted follower of Rebecca Wells or Jill Conner Browne's Sweet Potato Queens, then Mary Kay's Hissy Fit is not to be missed.

This book is a contribution to our understanding of Renaissance art in Northern Italy. It is principally concerned with the work of two unnamed miniature painters active in Venice in the 1470s and 1480s, a time of transition from manuscript illumination to the decoration of printed books in the classicizing style of the Renaissance.

The Anatomy of Disillusion is an introduction to Heidegger's phenomenology that focuses on Heidegger's notion of truth. Unlike many of his contemporaries, W.B. Macomber presents Heidegger as a systematic thinker, whose phenomenology is inextricably bound up with his ontology and epistemology.

ESCAPE FROM EARTH is the untold story of the engineers, dreamers and rebels who started the American space programme. In particular, it is the story of Frank Malina, founder of what became Nasa's Jet Propulsion Laboratory and the scientist who cracked the, as he called it, problem of escape from the Earth by rocket. It's a wild ride. Jack Parsons, Malina's chemistry-expert research partner, was a bed-hopping occultist with delusions of grandeur. We get all the horrible details: drug parties and sex magic, cameos by Aleister Crowley and L Ron Hubbard, and an ill-fated attempt to start a mail-order religion. Armed with hitherto unpublished letters, journals, and documents from the Malina family archives, Fraser MacDonald reveals what we didn't know. Jack Parsons betrayed Frank Malina to the FBI, cooperating fully in their investigation of Malina for un-American activities. The Jet Propulsion Lab's second director secretly denounced Frank as a Communist. Frank's research group had close ties to the spy network of the infamous Rosenbergs - the only Americans executed during the Red Scare. This is a story of soaring ideals entangled in the most human of complications: infidelity and divorce, betrayal and treason.

The book trade underwent a radical change at the end of the twentieth century that mirrored our cultural fascinations with electronic media and consumer culture, as old family firms were replaced by corporations, the ending of the Net Book Agreement gave shops a new freedom to compete by cutting their prices, and booksellers saw patrons increasingly influenced by the rise of the Internet. The British Book Trade is more than a book about books that considers the influence of these events and others-- it also describes the heyday of book publishing and how that world has changed. This volume provides access to a culture often perceived as glamorous, incestuous, and hard to enter, through the words of insiders across the board--from sales representatives and shop assistants to secretaries, editors, and executives. Their experiences range from the 1920s to the present and include recollections of the British trade at home and overseas as far as Australia, South East Asia, and India. The British Book Trade draws on accounts from the Book Trade Lives collection of in-depth oral history interviews recorded by the National Life Stories and accessible through the British Library Sound Archive--which presents a wealth of seldom-heard materials on book and publishing culture.

An incredible album of rare, recently discovered drawings from the Carl Faberge workshop in St. Petersburg is reproduced in its entirety. Over 1,000 pieces are illustrated, essential components of Faberge's oeuvre during a period considered to be one of the richest in terms of quality and design. These objects - produced primarily from 1911 to 1913 - are drawn to scale in pencil, pen and ink, nearly all of them beautifully filled in with watercolor. In addition to the album, there are illustrations of 40 objects found by the authors juxtaposed with their original drawings as well as contemporary photographs of Faberge's workshops. The text examines the pieces in both their social and artistic contexts including relevant source materials.

A lively challenge to postmodern opinion that reveals satisfying and reliable certainties.

Diagnostics, or fault finding, is a fundamental part of an automotive technician's work, and as automotive systems become increasingly complex there is a greater need for good diagnostic skills. Advanced Automotive Fault Diagnosis is the only book to treat automotive diagnostics as a science rather than a check-list procedure. Each chapter includes basic principles and examples of a vehicle system followed by the appropriate diagnostic techniques, complete with useful diagrams, flow charts, case studies and self-assessment questions. The book will help new students develop diagnostic skills and help experienced technicians improve even further. This new edition is fully updated to the latest technological developments. Two new chapters have been added – On-board diagnostics and Oscilloscope diagnostics – and the coverage has been matched to the latest curricula of motor vehicle qualifications, including: IMI and C&G Technical Certificates and NVQs; Level 4 diagnostic units; BTEC National and Higher National qualifications from Edexcel; International Motor Vehicle qualifications such as C&G 3905; and ASE certification in the USA.

Perhaps the most iconic steam locomotive in the world, the legendary Flying Scotsman was the first train to achieve 100mph and in its glory days ran the only non-stop passenger service between London and Edinburgh. When it was withdrawn from regular service in 1963, after nearly 40 years in service, the locomotive had travelled an estimated two million miles. In January 2016, after a complete and expert restoration project lasting a decade, Flying Scotsman returned to the UK's mainline as one of the jewels in the National Railway Museum's collection.

This commentary on the book of Psalms by Robert Davidson seeks to show how a knowledge of the place the psalms originally had in the worship of ancient Israel enables them to come alive in worship within believing communities today.
