In this landmark Companion, expert contributors from around the world map out the field of the critical medical humanities. This is the first volume to introduce comprehensively the ways in which interdisciplinary thinking across the humanities and social sciences might contribute to, critique and develop medical understanding of the human individually and collectively. The thirty-six newly commissioned chapters range widely within and across disciplinary fields, always alert to the intersections between medicine, as broadly defined, and critical thinking. Each chapter offers suggestions for further reading on the issues raised, and each section concludes with an Afterword, written by a leading critic, outlining future possibilities for cutting-edge work in this area. Topics covered in this volume include: the affective body, biomedicine, blindness, breath, disability, early modern medical practice, fatness, the genome, language, madness, narrative, race, systems biology, performance, the postcolonial, public health, touch, twins, voice and wonder. Together the chapters generate a body of new knowledge and make a decisive intervention into how health, medicine and clinical care might address questions of individual, subjective and embodied experience.

The past few decades have seen the increasing use of evidence in all aspects of healthcare. The concept of evidence-informed healthcare began in the 1990s as evidence-informed practice, and has since become widely accepted. It is also accepted that the training of medical graduates must be informed by evidence obtained from educational research. This book utilizes an evidence-informed approach to improve discipline-based undergraduate medical curricula. Discipline-based undergraduate medical curricula represent a widely adopted choice for undergraduate medical education around the world. However, there have been criticisms leveled against the discipline-based approach. One of the shortcomings cited is that students are insufficiently equipped to meet the challenges of today's healthcare. As a result, various strategies have been proposed. One option, currently in vogue, is the outcome-based approach, wherein the exit

behaviors of medical graduates are explicitly examined and used to guide the educational process. The shortcomings present in discipline-based undergraduate medical curricula can be overcome by the strengths of these strategies. This book recommends improving discipline-based undergraduate medical curricula by combining several strategies, including the adoption of an outcome-based approach and the use of evidence-informed implementable solutions. The book is relevant for all faculty, administrators and policymakers involved in undergraduate medical education, and can also be used as a resource for faculty development.
