It's hard to believe that it's been over a decade since *One Jump Ahead: Challenging Human Supremacy at Checkers* was published. I'm delighted to have the opportunity to update and expand the book. The first edition ended on a sad note and that was reflected in the writing. It is now eleven years later and the project has come to a satisfying conclusion. Since its inception, the checkers project has consumed eighteen years of my life— twenty if you count the pre-CHINOOK and post-solving work. It's hard for me to believe that I actually stuck with it for that long. My wife, Steph, would probably have something witty to say about my obsessive behavior. Rereading the book after a decade was difficult for me. When I originally wrote *One Jump Ahead*, I vowed to be candid in my telling of the story. That meant being honest about what went right and what went wrong. I have been criticized for being hard on some of the characters. That may be so, but I hope everyone will agree that the person receiving the most criticism was, justifiably, me. I tried to be balanced in the storytelling, reflecting things as they really happened and not as some sanitized everyone-lived-happily-ever-after tale. The field of educational psychology draws from a variety of diverse disciplines including human development across the life span, measurement and statistics, learning and motivation, and teaching. And within these different disciplines, many other fields are featured including psychology, anthropology, education, sociology, public health, school psychology, counseling, history, and philosophy. In fact, when taught at the college or university level, educational psychology is an ambitious course that undertakes the presentation of many different topics all tied together by the theme of how the individual can best function in an "educational" setting, loosely defined as anything from pre-school through adult education. Educational psychology can be defined as the application of what we know about learning and motivation, development, and measurement and statistics to educational settings (both school- and

From the advent of autism as a diagnosed disorder in the 1940s to the present day, the musical talents and affinities of autistic people have been widely recognized. Articles on autistic musical savants, studies on the high incidence of perfect pitch among autistic research subjects, and reports on the therapeutic value of music for autistic individuals have reinforced such impressions. Meanwhile, retrospective "diagnoses" of autism in late, great musicians such as pianist Glenn Gould and composer Bela Bartok have added an aura of mystique and allure to the popular image. Given all this attention to the integral connection between music and autism, it is

surprising how little effort has been made to ask autistic people themselves about how they make and experience music, and why it matters to them that they do. In *Speaking for Ourselves*, renowned ethnomusicologist Michael Bakan does just that, engaging in deep conversations - some spanning over the course of years - with ten fascinating and very different individuals who share two basic things in common: an autism spectrum diagnosis and a life in which music is central. These conversations offer profound insights into the intricacies and intersections of music, autism, neurodiversity, and life in general, not from an autistic point of view, but rather from many different autistic points of view. They invite readers to partake of a rich tapestry of words, ideas, and musical sounds that speak to both the diversity of autistic experience and the common humanity we all share.
