Student Success in the Prescribing Safety Assessment (PSA) The Prescribing Safety Assessment (PSA) is a two-hour open-book online examination which comprises eight sections incorporating eight main types of questions. The questions are structured around clinical case-based scenarios, requiring a holistic approach to analysing information and identifying key points. Many health problems that healthcare practitioners encounter derive from or are complicated by alcohol use disorders (AUD). Four approved medications that treat AUD make treatment in primary care a viable adjunct or alternative to specialty care, with many potential advantages. Screening for and providing brief interventions to treat AUD in general medical settings promote healthy life choices and increase the likelihood of recovery, especially for patients who have not yet progressed to chronic alcohol dependence, those with comorbid medical disorders being treated in these settings, and those who otherwise would not seek or receive treatment for their AUD. This report provides a resource to assist the health-care provider in this effort. Illus.

Praise for the Second Edition: "This is a very well-written book...My students appreciated the down-to-earth style of writing...Many of my students are deathly afraid of topics that have anything to do with biology. [They] were assured by the lack of jargon and the fact that the chapters were written in a way that they could easily understand. I look forward to the third edition!" -Nathan Thomas, LCSW San Jose State University, School of Social Work "New findings emerge daily, and new medications hit the market every year...The nature of this topic lends itself to revision at least every 2-3 years to stay current and germane to current practice standards... The case studies are a nice way to transform and integrate clinical principles with social work practice. Students have enjoyed the book as a foundational text." -Dr. Robert Mindrup, PsyD, University of Tennessee, Knoxville, College of Social Work This comprehensive text—noted for its facility in integrating principles into practice--prepares social work students to play a key role within an interdisciplinary health care team: that of counseling clients who are taking medications used to treat common mental health conditions. The publication of this third edition of the definitive text on clinical forensic medicine comes at an exciting time for a subject now gaining recognition as a speciality in the medical establishment. This growing acknowledgement reflects the fact that increasing numbers of health professionals are becoming engaged in general forensic services. Nurses and paramedics are more involved than ever in custody care, while nurses themselves are conducting more examinations in cases involving alleged sexual offences. Thus it is vital that those caring for this vulnerable group of patients (whether detainees or complainants) have the tools to master this specialist set of skills. All the chapters in this new edition have been fully updated, with some undergoing extensive revision. Recent developments in child protection protocols have prompted a major rewrite of the chapter on non-accidental injury, and the text now includes a specific chapter on the use of the TASER. Other aspects of restraint are now dealt with separately. The material on care of detainees and fitness for interview has been split into individual chapters to allow a more comprehensive discussion of the issues. In addition, new authors have joined the team of contributors, facilitating a wider range of international

perspectives. From its chapters on the history and core principles of clinical forensic medicine, right up to the text's discussion of substance misuse and deaths in custody, this volume remains the gold standard source for health professionals whose working lives bring them into contact with those in the law enforcement arena.
