NCLEX® Examination Preparation sections in each chapter contain numerous NCLEX Examination-style practice questions, many of them application-based, including at least one alternate-format question per chapter. An increased focus on prioritization provides practice in identifying the most important, need-to-know nursing actions. Drug dosage calculation questions, one of which appears in every chapter, facilitate mastery of the mathematics of drug dosing.

The purpose of this pharmacology study guide is to help nursing graduates work through the vast amount of pharmacological knowledge required for the NCLEX-RN(r) in a systematic and purposeful way. The breadth

and detail of the knowledge required of pharmacological concepts often overwhelms new graduates when they are beginning their exam preparation. This guide organizes content using the current NCLEX-RN(r) Test Plan (2016-2019) and provides specific strategies to address pharmacological areas of review which may challenge new graduates in their exam preparation. The guide was created by an experienced undergraduate nurse educator specializing in critical thinking development and application for high stakes exam writing. Many candidates, while studying for the NCLEX-RN(r), often forgo studying pharmacological concepts in the detail required for the exam. Unique to this Pharmacology Guide is a five step algorithm, created by the author, to help graduates approach drug-to-drug interaction questions. This algorithm is designed to help uncover correct answers by using pharmacological principles rather than memorizing drugs that interact with one another. The purpose of the modules in this Pharmacology study guide series are to: * Provide in-depth review of the major drug classes from a systems approach (e.g. respiratory, nervous system etc...) to help increase retention of key concepts and encourage application of pharmacological therapy in the context of disease management. * Summarize important information related to drug therapy and guide graduates to in-depth review of serious adverse events associated with medications. The modules will contain summary tables, review questions and exercises for key concepts. * Direct the reader to important areas for client assessment during drug therapy This is a working

1. Pharmacology textbook. This resource will contain the detailed information pertaining to drug classes and specific nursing considerations related to drug therapy.
2. Drug guide. These resources contain alphabetized drug information and outline pharmacokinetic and pharmacodynamics characteristics of medications. You will find important information related to the absorption, distribution, metabolism and excretions of drugs- as well as protein binding and therapeutic index.
3. An online drug repository if the resources above do not contain the information needed to answer the questions in the guide. Each module contains practice questions using NCLEX-RN(r) formatted questions. It is recommended that you seek additional practice questions from resources that challenge you to go into pharmacological concepts such as serious adverse events and drug-to-drug interactions in detail and test your knowledge specific nursing interventions related to drug therapy.
