This book examines the design and implementation of corporate social

responsibility (CSR) activities in rural areas, based on collaboration between well-known corporates and an international research organization. Researchers used various scientific tools and methods to enhance rural livelihoods and improve sustainable natural resources management. Including three chapters covering the philosophy and practices of CSR, this book covers emerging policies and their implications in India. Eight case studies based on actual practices explore climate-resilient agriculture, water footprint, improving livelihoods, diversification of crop pattern, enhancing crop productivity, and sustainable development in low rainfall regions. Five further chapters cover soil health improvement, improving rural wastewater management and enhancing rural livelihoods, based on various case studies. The book offers macro and micro perspectives of CSR work and its critical benefits to both community and natural resources. This book covers: Philosophy and practices of corporate social responsibility. Impact studies on improving livelihoods and sustainable development of natural resources. Process steps across various CSR initiatives. Distinct features of each corporate agency. This book will be useful to corporates, individuals involved in CSR work as well as students and researchers focused on agricultural development and the sustainable development of natural resources.

This book investigates the ways in which the evidence base is influencing complementary and alternative medicine in general and Ayurveda and allied health practices in particular. The latter have traditionally been prevalent in Asia and are now increasingly attracting interest worldwide. The book is divided into four sections, the first of which examines issues related to acquisition and evaluation of the evidence base. Evidence-based approaches to Ayurvedic diagnosis and therapy are then examined, with a special focus on management of cardiovascular and rheumatological diseases, dental care, and rejuvenating treatments. The final section explores further the challenges of applying evidence-based practice in contemporary and alternative medicine and Ayurveda with a focus upon the issues requiring urgent attention in ongoing decade. The same involves encompassing areas such as Ayurvedic pharmaceuticals, practice, education and research within an evidence-based perspective.

This book discusses Asian medicine, which puts enormous emphasis on prevention and preservation of health, and examines how, in recent decades, medical schools in Asia have been increasingly shifting toward a curative approach. It offers an ethnographic investigation of the scenarios in China and India and finds that modern students and graduates in these countries perceive Asian medicine to be as important as Western medicine. There is a growing tendency to integrate Asian medicine with Western medical thought in the academic curriculum that has led to a gradual decline of Asian medical thought and practices. At the same time, there has been a massive rise in patent drugs, health products and cosmetics being sold under the brand names of Asian medicine or herbal medicine. Most of these drugs and health products do not follow the classical formulas found in the Asian medical texts. The book analyses these texts and concludes that contemporary Asian medicine rarely follows the classical texts, and in fact uses Asian medicine brands to sell Western health products and practices. With a particular focus on the formal and professional sector of Chinese herbal medicine and Indian ayurvedic medicine in urban areas, this book appeals to a broad readership, including undergraduate students and academics as well as non-experts. Doctoral Thesis / Dissertation from the year 2007 in the subject Medicine - Alternative Medicine, grade: A (Gold Medalist), , course: MD (AYURVEDA), language: English, abstract: The Ayurveda is the holistic system of medicine successfully thriving since time immemorial owing to its strong foundation in the form of the basic principles which have not undergone any alteration since their inception. The Ayurveda classics mainly the Charaka and Sushruta Samhita (treatises) are a treasure of knowledge in a code form. These classics need to be reviewed in the new and contemporary scientific background to re validate their strength. The disease Anaemia is a very common ailment widely prevalent in India and the developing world. Ayurveda mentions Anaemia in the form of the depleted blood tissue (rakta dhatu in Ayurveda parlance) . The science of Ayurveda explained the inter-relationship of the tissues as the increase of one tissue causes an increase in the other and vice versa. This principle of the inter-relationship is of great application both in the understanding of the physiology and the pathology followed by the application in the clinical practice. Ayurveda approves that treatment is the replenishment of the depleted and depletion of the overload/excess. In this work, this principle of inter-relationship is applied clinically. The medicines used are the Shatavari (*Asparagus racemosus*) and the Milk. These two drugs are natural tonics that are proved to be the augmenters of the first tissue namely the Rasa (Plasma in modern parlance). Thus, by increasing the Rasa there should be an increase in the second tissue of Rakta/Blood. This assessment of inter-relationship between the tissues is aimed clinically in this work. The clinical study has a two group division, treatment group and the standard control group. All the relevant investigations from the Ayurvedic methodology and the contemporary sciences have been carried out and assessed and evaluated through a special grading and research proforma. The necessary statistical tests like the paired 't' test has been utilized to understand the significance of the study. The results were discussed with the specialists and experienced and thus, the final conclusions drawn that indicate a very significant trend in proving the validity of the Ayurvedic fundamentals. The details of all this are presented in the text.

This book constitutes the proceedings of the 20th International Conference on Conceptual Structures, ICCS 2013, held in Mumbai, India, in January 2013. The 22 full papers presented were carefully reviewed and selected from 43 submissions for inclusion in the book. The volume also contains 3 invited talks. ICCS focuses on the useful representation and analysis of conceptual knowledge with research and business applications. It advances the theory and practice in connecting the user's conceptual approach to problem solving with the formal structures that computer applications need to bring their productivity to bear. Conceptual structures (CS) represent a family of approaches that builds on the successes of artificial intelligence, business intelligence, computational linguistics, conceptual modeling, information and Web technologies, user modeling, and knowledge management.

The Indian system of medicine is known for its classical literature, mainly the major triad of the Charaka Samhita, Sushruta Samhita and the Ashtanga Hridayam. These classical texts were created by the seers of yore who had a profound knowledge free of any shortcomings. These ancient literary gems were based on the strong foundation of Indian Philosophy, mainly the theistic ones. Out of the three major classics, the Charaka Samhita is well known for its deliberations on the speciality of medicine. The main postulates of the Charaka Samhita aim at the maintenance of health of the healthy and the treatment of the diseased. The Charaka Samhita has a total of 120 chapters divided into 8 sections known as Sthana. The first and foremost is the Sutra Sthana, i.e. the section dealing with the fundamentals of the Indian system of medicine known as Ayurveda. All the basic principles of the Ayurveda system related to the health are mentioned in this section. These principles find their application elsewhere in the other seven sections of the text. One of the most important of all the sections of the Charaka Samhita is the Vimana Sthana, i.e. the section dealing with measurement/standardization. It is hereby referred to as the Section of Examinations or the Pariksha Sthana. The Vimana Sthana has a total of 8 chapters which ponder over a wide range of subjects like the special effects of drugs, epidemiology, pathology, dietetics, ways of gaining knowledge and the

teaching methodology. The discussion in the Vimana Sthana centers on the different types of examination of the patient, mainly the ten-fold examination of the natural constitution (prakriti), vikriti (pathology) et al. Along with these examinations, there is a vivid description of the teaching methodology in the Ayurveda system of medicine with an emphasis on the friendly discussions. The fundamentals of research like the drug research and the five-fold research protocol are also conspicuous by their presence and find their widespread utility in the contemporary research arena. Thus, the Vimana Sthana provides ample knowledge to the seekers of Ayurveda knowledge and paves the way for research and standardization in this ancient holistic Indian System of medicine.
