AS READ ON BBC RADIO 4 BOOK OF THE WEEK. The fascinating story of how we have gone out to eat, from the ancient Romans in Pompeii to the luxurious Michelin-starred restaurants of today. Tracing its earliest incarnations in the city of Pompeii, where Sitwell is stunned by the sophistication of the dining scene, this is a romp through history as we meet the characters and discover the events that shape the way we eat today. Sitwell, restaurant critic for the Daily Telegraph and famous for his acerbic criticisms on the hit BBC show MasterChef, tackles this enormous subject with his typical wit and precision. He spies influences from an ancient traveller of the Muslim world, revels in the unintended consequences for nascent fine dining of the French Revolution, reveals in full hideous glory the post-Second World War dining scene in the UK and fathoms the birth of sensitive gastronomy in the US counterculture of the 1960s. This is a story of the ingenuity of the human race as individuals endeavour to do that most fundamental of things: to feed people. It is a story of art, politics, revolution, desperate need and decadent pleasure. Sitwell, a familiar face in the UK and a figure known for the controversy he attracts, provides anyone who loves to dine out, or who loves history, or who simply loves a good read with an accessible and humorous history. The Restaurant is jam-packed with extraordinary facts; a book to read eagerly from start to finish or to spend glorious moments dipping in to. It may be William Sitwell's History of Eating Out, but it's also the definitive story of one of the cornerstones of our culture.

The acclaimed food critic's two-thousand-year history of going out to eat, from the ancient Romans in Pompeii to the luxurious Michelin-starred restaurants of today. Starting with the surprisingly sophisticated dining scene in the city of Pompeii, William Sitwell embarks on a romp through culinary history, meeting the characters and discovering the events that shape the way we eat today. The Daily Telegraph restaurant critic and famously acerbic MasterChef commentator, Sitwell discusses everything from the far-reaching influences of the Muslim world to the unintended consequences of the French Revolution. He reveals the full hideous

glory of Britain's post-WWII dining scene and fathoms the birth of sensitive gastronomy in the counterculture of 1960's America. The Restaurant is jam-packed with extraordinary facts and colorful episodes; an accessible and humorous history of a truly universal subject. This book is about the Zynq-7000 All Programmable System on Chip, the family of devices from Xilinx that combines an application-grade ARM Cortex-A9 processor with traditional FPGA logic fabric. Catering for both new and experienced readers, it covers fundamental issues in an accessible way, starting with a clear overview of the device architecture, and an introduction to the design tools and processes for developing a Zynq SoC. Later chapters progress to more advanced topics such as embedded systems development, IP block design and operating systems. Maintaining a 'real-world' perspective, the book also compares Zynq with other device alternatives, and considers end-user applications. The Zynq Book is accompanied by a set of practical tutorials hosted on a companion website. These tutorials will guide the reader through first steps with Zynq, following on to a complete, audio-based embedded systems design.

Accompanying DVD-ROM (i.e.: hybrid DVD-Video/DVD-ROM) contains ... "dynamic application of DVD technology with samples from Dolby, DTS, THX, IMAX, Joe Kane Productions, Microsoft, Widescreen Review, and others, plus audio/video tests, WebDVD, HTML files, spreadsheets, and more."--Page 4 of cover.

Continuing the explorations begun in the first two Producing Theory volumes, this book investigates some of the tensions generated in the spaces enabled by the confluence of the formerly disparate activities of producing and consuming media. Multiple and varied theories--some still emerging--are invoked in attempts to illuminate the spaces between what previously had been neatly-separated components of media systems. This book is useful in a number of courses such as media culture and theory, introduction to new media, the Internet and the audience, new media theory and research, mass communication theory, emerging media, critical analysis and new media, concepts of new media, new media participants, new media in a democratic society, critical studies in new media, new media and social media, digital media studies, participatory media, media audiences in a digital world, digital cultures and social media, Web culture and new media studies, introduction to new media, new media and society, and more.

A compilation of selected review essays from Erickson's DVD Savant internet column. Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in

the evaluation process. Ming, James E. Goddard Space Flight Center
To advance education about ICT standardization, comprehensive and up-to-date teaching materials must be available. With the support of the European Commission, ETSI has developed this textbook to facilitate education on ICT standardization, and to raise the knowledge level of ICT standardization-related topics among lecturers and students in higher education, in particular in the fields of engineering, business administration and law. Readers of this book are not required to have any previous knowledge about standardization. They are introduced firstly to the key concepts of standards and standardization, different elements of the ecosystem and how they interact, as well as the procedures required for the production of standardization documents. Then, readers are taken to the next level by addressing aspects related to standardization such as innovation, strategy, business, and economics. This textbook is an attempt to make ICT standardization accessible and understandable to students. It covers the essentials that are required to get a good overview of the field. The book is organized in chapters that are self-contained, although it would be advantageous to read the book from cover to cover. Each chapter begins with a list of learning objectives and key messages. The text is enriched with examples and case studies from real standardization practice to illustrate the key theoretical concepts. Each chapter also includes a quiz to be used as a self-assessment learning activity. Furthermore, each book chapter includes a glossary and lists of abbreviations and references. Alongside the textbook, we have produced a set of slides that are intended to serve as complementary teaching materials in face-to-face teaching sessions. For all interested parties there is also an electronic version of the textbook as well as the accompanying slides that can be downloaded for free from the ETSI website (www.etsi.org/standardization-education).

The skills and guidance needed to master RTL hardware design This book teaches readers how to systematically design efficient, portable, and scalable Register Transfer Level (RTL) digital circuits using the VHDL hardware description language and synthesis software. Focusing on the module-level design, which is composed of functional units, routing circuit, and storage, the book illustrates the relationship between the VHDL constructs and the underlying hardware components, and shows how to develop codes that faithfully reflect the module-level design and can be synthesized into efficient gate-level implementation. Several unique features distinguish the book: * Coding style that shows a clear relationship between VHDL constructs and hardware components * Conceptual diagrams that illustrate the realization of VHDL codes * Emphasis on the code reuse * Practical examples that demonstrate and reinforce design concepts, procedures, and techniques * Two chapters on realizing sequential algorithms in hardware * Two chapters on scalable and parameterized designs and coding * One chapter covering the synchronization and interface between multiple clock domains Although the focus of the book is RTL synthesis, it also examines the synthesis task from the perspective of the overall development process. Readers learn good design practices and guidelines to ensure that an RTL design can accommodate future simulation, verification, and testing needs, and can be easily incorporated into a larger system or reused. Discussion is independent of technology and can be applied to both ASIC and FPGA devices. With a balanced presentation of fundamentals and practical examples, this is an excellent textbook for upper-level undergraduate or graduate courses in advanced digital logic. Engineers who need to make effective use of today's synthesis software and FPGA devices should also refer to this book.
