“Danger was all that thrilled him,” Dick Byrd’s mother once remarked, and from his first pioneering aviation adventures in Greenland in 1925, through his daring flights to the top and bottom of the world and across the Atlantic, Richard E. Byrd dominated the American consciousness during the tumultuous decades between the world wars. He was revered more than Charles Lindbergh, deliberately exploiting the public’s hunger for vicarious adventure. Yet some suspected him of being a poseur, and a handful reviled him as a charlatan who claimed great deeds he never really accomplished. Then he overreached himself, foolishly choosing to endure a blizzard-lashed six-month polar night alone at an advance weather observation post more than one hundred long miles down a massive Antarctic ice shelf. His ordeal proved soul-shattering, his rescue one of the great epics of polar history. As his star began to wane, enemies grew bolder, and he struggled to maintain his popularity and political influence, while polar exploration became progressively bureaucratized and militarized. Yet he chose to return again and again to the beautiful, hateful, haunted secret land at the bottom of the earth, claiming, not without justification, that he was “Mayor of this place.” Lisle A. Rose has delved into Byrd’s recently available papers together with those of his supporters and detractors to present the first complete, balanced biography of one of recent history’s most dynamic figures. Explorer covers the breadth of Byrd’s astonishing life, from the early days of naval aviation through his years of political activism to his final efforts to dominate Washington’s growing interest in Antarctica. Rose recounts with particular care Byrd’s two privately mounted South Polar expeditions, bringing to bear new research that adds considerable depth to what we already know. He offers views of Byrd’s adventures that challenge earlier criticism of him—including the controversy over his claim to being the first to have flown over the North Pole in 1926—and shows that the critics’ arguments do not always mesh with historical evidence. Throughout this compelling narrative, Rose offers a balanced view of an ambitious individual who was willing to exaggerate but always adhered to his principles—a man with a vision of himself and the world that inspired others, who cultivated the rich and famous, and who used his notoriety to espouse causes such as

world peace. Explorer paints a vivid picture of a brilliant but flawed egoist, offering the definitive biography of the man and armchair adventure of the highest order.

He emerged from nowhere to seize the presidency, defeat populism and upend French party politics. Who is Emmanuel Macron? How far can he really change France? In *Revolution Française*, Sophie Pedder examines the first year in office of France's youngest and most exciting president in modern times, with unique perspective from her time as head of The Economist's Paris bureau. President Emmanuel Macron's vision for France is far more radical than many realise. His remarkable ascent from obscurity to the presidency is both a dramatic story of personal ambition and the tale of a wounded once-proud country in deep need of renewal. What shaped this enigmatic character, the precociously bright student and talented networker from northern France; the philosophy graduate and Rothschild banker who married his school drama teacher? How did a political outsider manage to defy the unwritten rules of the Fifth Republic and secure the presidency at his first attempt? And what are the underlying ideas behind his vision? This book chronicles Macron's remarkable rise from independent outsider to the Élysée Palace, situating the achievement in a broader context: France's slide into self-doubt, political gridlock and a seeming reluctance to embrace change; the roots of populism and discontent; the fractures caused by globalisation and the Le Pen factor. Looking back on the young president's dramatic first year in power, with analysis of his key reforms and lofty ambitions, it asks how far it is possible for Macron to reinvent a conservative nation uneasy about embracing the future. Can the man nicknamed 'Jupiter' really return France to its former greatness, or will he, by the time his mandate expires, end up as just another side note in political history? Punctuated with first-hand conversations and reporting, this book takes on all of these questions, concluding with a fascinating and exclusive interview with Macron recorded in early 2018. Pedder's riveting, and essential, book will be one of the most captivating political books of this year.

This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are

associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving".
