Explains soil's role in ecology and the economy, and reveals how treating soil in an environmentally sensitive way can bring about positive changes with respect to climate change, biodiversity loss, obesity, and other crises.

Providing a step-by-step guide to going green by the UK's leading eco auditor, this title explains why going green matters and how to get started, including tips on identifying and overcoming bad habits and coping with feeling overwhelmed.

Describes an environmental research team's plan for a global economy

Rick Fedrizzi is the most important environmentalist you've never heard of--and Greenthink is his manifesto. A former Fortune 50 manufacturing executive, Fedrizzi became a leader of the modern environmental movement when he played an instrumental role in creating the most important and far-reaching sustainability movement of our time: the green building movement. Today, Fedrizzi's work and ideas are transforming the real estate industry, one of the largest sectors of the global economy, and one of the largest contributors to climate change. As a co-founder of the U.S. Green Building Council, Fedrizzi oversaw the creation of LEED--Leadership in Energy & Environmental Design--which has certified more than four billion square

feet of sustainable real estate worldwide. According to Paul Hawken, a legendary environmentalist, "USGBC may have had a greater impact than any other single organization in the world on materials saved, toxins eliminated, greenhouse gases avoided, and human health enhanced." But that's only half the story: the green building industry has also sparked billions of dollars of economic impact and created millions of jobs. This stunning revelation--that sustainability is profitable--is at the heart of Fedrizzi's call to action in *Greenthink*. For decades, environmentalists and the private sector have been at odds. Activists have decried the impact of industry on the environment. Business leaders, meanwhile, resent environmentalists for "job-killing regulations." But in *Greenthink*, Fedrizzi turns conventional wisdom on its head by showing how profit can save the planet, and how sustainability is the biggest business opportunity of the 21st century. With the urgency of Al Gore's *An Inconvenient Truth*, the illuminating stories of Tom Friedman's *The Lexus and the Olive Tree*, and the insight of Malcolm Gladwell's *The Tipping Point*, Fedrizzi calls the reader's attention to hidden yet fundamental truths about our environment, our society, and our economy. His message is as controversial as it is clear: leverage the profit motive to save the world--and its humans--from environmental catastrophe. With a heartfelt foreword by actor and activist Leonardo DiCaprio, *Greenthink* is a must-read for anyone who cares about the future of our environment, or the future of our economy. Because, in Fedrizzi's words, "they will share the same fate."

Switching off the lights when not in use, turning off running/leaking faucets, and planting trees are some of the simplest habits to save our planet. 365 Days of Saving Our Planet encourages children to pick up one green habit a day to do their bit for planet Earth. From preventing food wastage, adopting healthier activities such as walking and cycling to reduce the carbon footprint, saving water, conserving flora and fauna, going organic, proper disposal of waste, to choosing renewable sources over non-renewables, this book is about sustainability and eco-friendly methods. Say 'Yes' to acting green!

The New York Times-bestselling "skeptical environmentalist" argues that panic over climate change is causing more harm than good. Hurricanes batter our coasts. Wildfires rage across the American West. Glaciers collapse in the Arctic. Politicians, activists, and the media espouse a common message: climate change is destroying the planet, and we must take drastic action immediately to stop it. Children panic about their future, and adults wonder if it is even ethical to bring new life into the world. Enough, argues bestselling author Bjorn Lomborg. Climate change is real, but it's not the apocalyptic threat that we've been told it is. Projections of Earth's imminent demise are based on bad science and even worse economics. In panic, world leaders have committed to wildly expensive but largely ineffective policies that hamper growth and crowd out more pressing investments in human capital, from immunization to education. False Alarm will convince you that everything you think about climate change is wrong

-- and points the way toward making the world a vastly better, if slightly warmer, place for us all.

If the closest you've ever come to natural living is choosing the 'light' version of mayonnaise - this book is for you. If the only recycling you've ever done is chucking your wine bottles into the car park's bottle bin just to rejoice in the crashing sound - it's still for you.

A comprehensive guide to the ways we can all make small changes in our lives to help tackle climate change - a topic which, it is now becoming clear, is of utmost importance and urgency. Together, we can change the world. There is little doubt that our beautiful planet is now under huge threat; our weather is more extreme, plastic litters our oceans, industrial production and farming methods wreak havoc on the environment and mass deforestation has led to the extinction of many species. Carry on this way and it's almost certain that sea levels will continue to rise, there will be extreme heatwaves, loss of the polar ice caps and mass pollution; in short, a very worrying future for us all. We need to take action before it's too late, and we can all do our bit to help. This guide is full of simple tips we can all incorporate into our daily lives, and will demonstrate how small eco-friendly changes can have a huge positive effect on the world around us. They might even save the planet.

A pacifist's timely and passionate manifesto addressing the issue of global warming. Utopia, as Ratzlaff explains, is not some unattainable oasis but rather a world without war and with a balanced global habitat that can sustain future generations. [R]ank and file Americans need to be able to comprehend what global warming is all about, the author

writes, in order to grasp what will happen if we fail to take immediate steps to combat it. The book is not a scientific treatise bogged down with academic language, but rather a pacifists simple approach to solving one of the worlds most difficult dilemmas. Employing a minimum of hard data to explore melting ice caps, rising sea levels, changing weather patterns and ocean currents, Ratzlaff effectively illustrates the cause-and-effect relationship between human activity and the planets well-being. While Al Gore answered the hows and whys of global warming in An Inconvenient Truth, Ratzlaff illustrates the imminent need for vast governmental and political changes, and he explains the consequences of ignoring the obvious threat to our planet. The author states that one of the biggest problems with the current approach to global warming is the tendency of advocates to ignore the significant role of population growth. Additionally, at the roots of global warming lay nationalism, religious wars and the military-industrial complex Ratzlaff outright blames governments and corporations for the current situation. After demonstrating the various successes of the United Nations in heading off global conflicts, the author concludes that the UN is the only organization capable of becoming a fully empowered international governing body. Yet handcuffed by its current structure, it can do nothing more than cast environmental resolutions that are often ignored. Unlike other books that attempt to tackle major global issues, rather than pointing out the problems and offering no solutions, Ratzlaff rounds out each of the seven steps with definitive alternatives in his If I Were President summaries. A thorough yet easy-to-comprehend take on global warming. KIRKUS REVIEWS

Inspired by the author's former mentor David MacKay (Sustainable Energy without the Hot Air), Food and Climate Change is a rigorously researched discussion of how food and climate change are intimately connected. In this ground-breaking and accessible work, Prof Sarah Bridle focuses on facts rather than emotive descriptions. Highly illustrated in full colour throughout, the book explains how anyone can reduce the climate impact of their food.

Are You Overwhelmed by "Going Green?" You read the news about worsening air and water pollution, climate change, droughts and diminishing natural resources, and you worry if your family will have a healthy future. The problem seems so big and overwhelming. What can you do? Why bother? You have the power and it starts right at home. Change starts with each of us, right where we each live. By making a series of small, doable changes, in aggregate, you will make a big difference--in your budget, and in the world. Are You Ready to Make A Difference? In this book, top eco-blogger Dawn Gifford shares her extensive research into why today's environmental problems exist. She gives you all the facts and data you need to understand the issues, then shares simple, succinct actions that you can easily implement right away. You can start saving hundreds or even thousands of dollars a year, be empowered to greater self-sufficiency, reduce your carbon, water, energy and consumption footprints and have a tangible sense that you ARE making that difference. What are You Waiting For? Discover how to save up to \$200 a year simply by lowering your thermostat to this setting. (Chapter 8) Learn how to save 7,500 gallons of water and \$140 in electricity costs every year, just by installing these inexpensive plumbing items. (Chapter 12) Get your home or business electricity from solar for less than the cost of your current utility bill--and lock in those prices for years to come.

"Pithy, funny, exasperated, and informed... You cannot read a more important hundred pages than Stop Saving the Planet!" —Richard White, author of The Republic for Which It Stands We've been "saving the planet" for decades!... And environmental crises just get worse. All this hybrid driving and LEED building and carbon trading seems to accomplish little to nothing—and low-income communities continue to suffer the worst consequences. Why aren't we cleaning up the toxic messes and rolling back climate change? And why do so many Americans hate environmentalists? Jenny Price says Enough already! with this short, fun, fierce manifesto for an environmentalism that is hugely more effective, a whole lot fairer, and infinitely less righteous. She challenges you, corporate sustainability officers, and the EPA to think and act completely anew—and to start right now—to ensure a truly habitable future.

A key starting point for understanding and achieving sustainability are our experiences of everyday life, the meanings and the connections we develop, and the learning and action these experiences engender. This book explores how learning throughout and across life is, and may become, an integral aspect of the process of sustainable development. It addresses the need for "life-long learning," that is, learning that occurs in various aspects of our lives including work, families, home, community groups, or any non-traditional "school" or learning environments, to seriously engage with sustainability issues. Coverage includes the relationship between learning and sustainability, sustainability and everyday life, environmental mediascapes, public space and landscapes, learning networks and community action, sustainability learning and leisure, work and the need to reshape our understanding of a learning society. The breadth is impressive with an approachable and easy-to-read engagement with theoretical approaches to lifelong learning

American entrepreneurs, corporate tycoons, and financiers are plotting what they do best—creating new industries that change the world and making billions in the process—a plot that will ultimately save the planet. *The Plot to Save the Planet* is an illuminating and inspiring look at the “conspiracy” to make green technology the Silicon Valley of the twenty-first century—the creator of massive numbers of jobs and huge amounts of wealth. Suddenly, the ugly mudslinging between environmentalists and big business has abated, and these two previously opposed forces are now strange bedfellows in a race to head off climate change. How is this new frontier being shaped? Brian Dumaine is your guide in this intriguing look into the very near future filled with colorful and informative stories about the entrepreneurs, investors, and corporate mavericks who are managing to pull off the feat of combining economic growth and environmental protection to battle global warming. You'll read about: • The savvy investors: Why Warren Buffett is investing heavily in wind power; and why John Doerr, the venture capitalist and early backer of Google, is saying that “green tech is bigger than the Internet and could be the biggest economic opportunity of the twenty-first century.” • The cars of the future: The competitively priced plug-in hybrids that will get 60 miles to the gallon, and the battle being waged by fifteen start-

ups competing to capture the electric car market. • The fuels without fossils: New sources of energy from plants such as prairie grass and algae that could capture a big chunk of the \$300 billion U.S. wholesale gasoline market. • The corporate mavericks: Companies such as Duke Energy and GE who are creating the low-carbon business models of the future, as well as cleaner ways to provide our power needs. • The energy-miser homes and buildings: The new Bank of America Tower in New York City and the green low- and middle-income homes being constructed by visionaries who were told it couldn't be done and still be affordable. • The "thin film" solar energy: How it is making the cost of heating a home comparable to traditional methods without emitting greenhouse gas. Plenty of obstacles still exist—among them resistance from the rich and powerful owners of the world's oil supply, developing nations such as China with their reliance on coal, and an American public reluctant to give up their McMansions, SUVs, and extreme air-conditioning. But the battle cry has been sounded. The green overhaul of the utility, energy, construction, shipping, and automobile industries is well on its way and—contrary to prevailing fears—the ultimate solutions will sustain the environment without demanding huge sacrifices to our contemporary comforts and lifestyles.

Following a six-step climate diet plan, families will be able to count their carbon calories and learn how to reduce them, leaving us with a slim healthy planet now and for the future. A timely and fascinating account of the revolution going on in the world of finance from the acclaimed author of *Double Entry*. This is the story of a twenty-first-century revolution being led by the most unlikely of rebels: accountants. Only the second revolution in accounting since double-entry bookkeeping began, it is of seismic proportions, driven by the 2008 financial crash and our ongoing environmental crisis. The changes it will wreak are profound and far-reaching and not only will transform the way the world does business but also will alter the nature of capitalism. While the wealth of nations and corporations has been vital to the global economy, increasingly the world is coming to realize that such endless growth is limited by the earth's resources and comes at a huge price to the planet and to human well-being. It simply cannot be sustained. This revolution demands that we go beyond merely accounting for traditional financial and industrial capital and take account of the benefits and detriments to the natural world and society. It urges us to

include four new categories of wealth: intellectual (such as intellectual property), human (skills, productivity, and health), social and relationship (shared norms and values), and natural (environment). Making them part of our financial statements and GDP figures may be the only way to address the many calamities we face. Just two years ago this revolution seemed idealistic and unlikely. Today it is quickly unfolding. In 2012, the sea-change year, two key initiatives took root: an international movement to transform how corporate accounting is calculated and the rise of incorporating the effects on the environment to the accounting of national and global economies. *Six Capitals* tells the story of this coming new age in capitalism, evaluating its promise and the disaster that lies ahead if it is not implemented.

pandemics, wildfires, investments, carbon targets and of course, on the key question: given all this, what can I do?

The Important question is this: Will you step up to the plate? Tens of millions of Americans do not believe in global warming or deny that climate change is being driven by human activity. Others accept the consensus from the vast majority of scientists in the international community that anthropogenic climate change is real; however, most do not fully understand it. This lack of agreement and understanding is also true for the majority of elected officials and legislators who are expected to make wise decisions. As a result, virtually nothing constructive has been done in the past forty years to effectively mitigate the consequences of our lifestyles, habits, and addictions in order to slow global warming trends. Americans continue to demand more stuff: gas guzzling SUVs and trucks; planes; meat, poultry, and fish; milk and cheese; genetically modified crops and all of the pesticides, herbicides, and fertilizers that accompany them; hardwood, sand for manufacturing concrete, coal powered plants, hydrofracking, and oil drilling. All of this stuff is necessary to sustain the neoliberal myth of infinite progress that fuels booming and emerging economies. What is not being asked is: what are the consequences of the choice I make? Shall I purchase water in a glass or plastic bottle? A

hamburger or veggie burger? Will I make an effort to buy only organic produce or doesn't it matter? The outcome is that, during just the past two years, the increase in global warming has included some of the worst climate events and news in recorded history. We can reasonably expect Category 4 and 5 hurricanes annually. There is no evidence that wildfires across the American West and Northwest will abate. Prolonged droughts will persist. Extreme storms, floods, and hotter weather, which now threaten global food security, are also creating a new norm. These environmental trends and more should force us to concede that humanity is on course to exceed its capacity to sustain a quality life throughout much of the world, including half of the United States. Yet, despite the lack of action in the US, there are nations and major cities around the world taking climate change seriously. Visionaries and scientists are creating unique and wonderful innovations in renewable energy to challenge America's hubris, denial, and complacency. Rather than descending into apathy, withdrawing into isolation and being unwilling to face these problems, this book intends to provide a deep and detailed strategy for how we can individually and collectively make a difference. And the foremost effort each of us can begin at this very moment is to adopt a healthy, plant-based diet. Not only is it affordable, but a vegan lifestyle will also strengthen our physical

This new volume in The Big Idea series surveys the detrimental impact humans have had on the planet and evaluates what we can do to reverse the damage. The effects of global warming are being felt around the world through climate change, and images of our rivers and oceans choking with plastic have provoked an instinctive, horrified reaction. In response, governments, corporations, and individuals are beginning to change their policies and behavior—but is it too little, too late? Is it still possible to reverse the damage we have done to the planet? This title in The Big Idea series, *Can We Save the Planet?*, provides an in-depth understanding of global warming, climate change, and the disastrous effects on our oceans through the prevalence of single-use plastics. It begins by setting out the evidence and arguments concerning the relationship of escalating carbon emissions and deforestation with the planet's environmental decline. It offers insightful analysis of our consumerist, throwaway culture, and evaluates whether we can save the planet through a combination of proactive individual action and governmental policy, or if we can only react to the problems caused as they arise, using modern technologies. *Can We Save the Planet?* is an incisive, engaging, and authoritative text on one

An "epoch-defining book" (The Guardian) and "this generation's Silent Spring" (The Washington Post), The Uninhabitable Earth is both a travelogue of the near future and a meditation on how that future will look to those living through it--the ways that warming promises to transform global politics, the meaning of technology and nature in the modern world, the sustainability of capitalism and the trajectory of human progress. The Uninhabitable Earth is also an impassioned call to action. energy, time and money Save the planet has it all covered. Being cleaner and greener has never been easier!

Fourteen-year-old Jason can't work out how to get climate change fixed—until he saves the life of the mysterious and powerful Graham. Graham promises a reward, and Jason asks him to do something to stop climate change. The request is caught by the media, so Jason thinks the man's trapped and has to keep his word. But Graham's got other ideas. Jason's got a fight on his hands.

The riotous story of a guilty liberal who snaps, swears off plastic, goes organic, turns off his power, and becomes a bicycle nut in an effort to make zero environmental impact Manhattanite Colin Beavan spent a year trying to live without a net environmental impact, and he dragged his baby daughter and Prada-loving wife along for the ride (bicycle-powered, of course). In other words, no trash, no toxins in the water, no elevators, no subway, no products in packaging, no air conditioning, no television...What would it be like to try to live a no-impact lifestyle? Is it possible? Could it catch on? Is living this way more satisfying or less satisfying? Is it worthwhile or senseless? These are the questions at the heart of this whole mad endeavour, which ultimately challenges each of us to embrace green living. \* The publisher has aimed for sustainability in all aspects of this book's production. For example, the interior paper is 100% post-consumer recycled, processed without chlorine, and certified by both the Forest Stewardship Council and EcoLogo. Instead of a jacket, the cover boards are stamped directly with ink, and the boards themselves are made from 100% recycled and FSC-certified materials.

**#1 NEW YORK TIMES BEST SELLER** • In this urgent, authoritative book, Bill Gates sets out a wide-ranging, practical—and accessible—plan for how the world can get to zero greenhouse gas emissions in time to avoid a climate catastrophe. Bill Gates has spent a decade investigating the causes and effects of climate change. With the help of experts in the fields of physics, chemistry, biology, engineering, political science, and finance, he has focused on what must be done in order to stop the planet's slide to certain environmental disaster. In this book, he not only explains why we need to work toward net-zero emissions of greenhouse gases, but also details what we need to do to achieve this profoundly important goal. He gives us a clear-eyed description of the challenges we face. Drawing on his understanding of innovation and what it takes to get new ideas into the market, he describes the areas in which technology is already helping to reduce emissions, where and how the current technology can be made to function more effectively, where breakthrough technologies are needed, and who is working on these essential innovations. Finally, he lays out a concrete, practical plan for achieving the goal of zero emissions—suggesting not only policies that governments should adopt, but what we as individuals can do to keep our government, our employers, and ourselves accountable in this crucial enterprise. As Bill Gates makes clear, achieving zero emissions will not be simple or easy to do, but if we follow the plan he sets out here, it is a goal firmly within our reach.

have the energy to do the movement building we need to change systems too! This book integrates the individual and the societal in a powerful way."--Bill McKibben We all understand just how dire the circumstances facing our planet are and that we all need to do our part to stem the tide of climate change. When we look in the mirror, we can admit that we desperately need to go on a climate diet. But the task of cutting down our carbon emissions feels overwhelming and the discipline required hard to summon. With *The Climate Diet*, award-winning food and environmental writer Paul Greenberg offers us the practical, accessible guide we all need. It contains fifty achievable steps we can take to live our daily lives in a way that's friendlier to the planet--from what we eat, how we live at home, how we travel, and how we lobby businesses and elected officials to do the right thing. Chock-full of simple yet revelatory guidance, *The Climate Diet* empowers us to cast aside feelings of helplessness and start making positive changes for the good of our planet.

Cities across the globe are growing fast. Today many are environmental nightmares with polluted air, excessive energy consumption and an absence of nature. But big cities don't have to mean a dystopian future. They can be turned around to be powerhouses of well-being and environmental stability – if we empower women. This book is a unique collaboration between C40 and Friends of the Earth showcasing pioneering voices in the environmental and feminist movements. This book reveals just how women's empowerment is critical to environmental sustainability. This book is a rallying call – for the planet, for women, for everyone.

"As clear a picture of humanity's impact on earth's natural environment as any ever written." --E. O. Wilson (from the Introduction) An urgent, resounding call to protect 50 percent of the earth's land by 2050--thereby saving millions of its species--and a candid assessment of the health of our planet

and our role in conserving it, from the award-winning author of *The Experience of Place* and veteran New Yorker staff writer. Beginning in the vast North American Boreal Forest that stretches through Canada, and roving across the continent, from the Northern Sierra to Alabama's Paint Rock Forest, from the Appalachian Trail to a ranch in Mexico, Tony Hiss sets out on a journey to take stock of the "superorganism" that is the earth: its land, its elements, its plants and animals, its greatest threats--and what we can do to keep it, and ourselves, alive. Hiss not only invites us to understand the scope and gravity of the problems we face, but also makes the case for why protecting half the land is the way to fix those problems. He highlights the important work of the many groups already involved in this fight, such as the Indigenous Leadership Initiative, the Yellowstone to Yukon Conservation Initiative, and the global animal tracking project ICARUS. And he introduces us to the engineers, geologists, biologists, botanists, oceanographers, ecologists, and other "Half Earthers" like Hiss himself who are allied in their dedication to the unifying, essential cause of saving our own planet from ourselves. Tender, impassioned, curious, and above all else inspiring, *Rescuing the Planet* is a work that promises to make all of us better citizens of the earth.
