An engaging and hands-on way to learn the language of health care, Stedman's Medical Terminology, 2e uses a proven "work text" approach that helps students master the information they need to communicate successfully in the health care world. More than 4,500 questions make this the most comprehensive medical terminology resource on the market. Each chapter begins with enough coverage of anatomy and physiology to provide the context for learning the medical terms, followed by Word Part and Terminology Tables that provide strategies for figuring out the meaning of new words and connecting them to the appropriate body system. Exercises in every chapter progress in a meaningful way from recall and review, to word building, to comprehension, and finally to application and analysis. This approach allows student to a see their vocabulary grow and to connect what they are learning to a real-life context. Study Tips in every chapter highlight common errors people make when working with medical terms, and give you tips for success. Reorganized chapters now align with the Memmler's Anatomy and Physiology text table of contents for cross-over consistency. Chapter Objectives have been changed to Learning Outcomes and rewritten where necessary. An updated design maximizes images and better aligns figures to content. Updated terms and references provide the most current and actively used language in today's health care settings. Flashcards were removed from back of the text, but are still available online. Revised and updated ancillary materials reflect changes made in the text.

Activity Analysis is an essential skill to occupational therapy. Students and practitioners need not only an understanding of what activity analysis is and how to break down the steps of a task, but also understand how each aspect of an activity influences participation in occupations. Occupation-Based Activity Analysis is a definitive text that effectively progresses the reader toward understanding the differences between occupations and activities, and the interaction of all of the components of activities and occupations, such as performance skills, client factors, activity demands, and contexts. Occupation-Based Activity Analysis by Heather Thomas instructs students to analyze activities using the domain components as outlined in the Occupational Therapy Practice Framework: Domain and Process, 2nd Edition. This timely text guides the reader through understanding the process of activity analysis from the perspective of examining typical activity demands. Learning of key concepts is reinforced through case examples, worksheets, exercises, and sample analyses. Beginning with defining the domain of practice through the areas of occupation, students will learn to identify occupations and activities, while learning to understand the importance of analysis to their domain of practice. Students and practitioners will also discover how to analyze the demands inherent to the activity itself, and the context which surround the activity and the people engaged in it. The component steps to analyzing activities or occupations are uncovered in separate chapters, each aspect reinforces concepts that are foundational to occupational therapy practice. A Glance at What Is Covered: • Activity versus occupation versus tasks • Areas of occupation defined • Details of how social and space demands, as well as objects influence performance • Client factors and body functions and structures defined as they relate to performance in occupations • The influence of the client’s contexts • Performance patterns and how their influence on occupations • How to grade and adapt an activity Instructors in educational settings can visit www.efacultylounge.com for additional material to be used for teaching in the classroom. Occupation-Based Activity Analysis is an excellent text for students and for practitioners looking to further their understanding of activity analysis.
