Bringing together leading authorities, this volume synthesizes the breadth of current research on child and adolescent treatment into a practical handbook for students and clinicians. The book was inspired by the preeminent work on adult disorders, *Clinical Handbook of Psychological Disorders* (now in its fifth edition), edited by David H. Barlow. It provides a concise overview of the disorders most commonly encountered in clinical practice and details evidence-based treatment approaches, largely grounded in cognitive-behavioral therapy (CBT). Procedures for assessment, diagnosis, case formulation, intervention, and progress monitoring are illustrated with rich extended case examples, including session transcripts. The book addresses nuts-and-bolts issues such as how to set up each session, what to cover, and how to broach difficult topics with children and parents. The author presents a varied menu of ideas and experiences in many areas - in research, in diagnosis, and in psychotherapy, each using art media with patients of all ages. She integrates art, phenomenology and gestalt psychology, describing specific techniques and findings. Part I of the book lays out the theoretical foundations and the techniques; Part II addresses the formal components used in art therapy - line, shape and colour in their interrelated dynamics and discusses other aspects and modes of symbolic expression found in clients' work. Part III looks at symbolic expression through the scribble, offering a system of classification, diagnostic possibilities and case studies of work with eating disorders. Part IV focuses on art expression for art therapy diagnostics, including a method for qualitative diagnostics, and a first full diagnostic battery for adolescents. Part V is devoted to Holocaust children's art expressions, highlighting the power of art expression in children under ultimate stress, the intensity of their inner experience, and its visualization in the structure of the pictures. The book is for art therapists and advanced students. It can be used as a textbook on phenomenological art therapy; for therapeutically-oriented art teachers, educators and social workers; and for practicing psychotherapists, to see that art is a source of expression demonstrating how a person is. Reissued with a new foreword by Raymond DiGiuseppe, PhD, ScD, St. John's University "New trainees often get the theory of psychopathology; they struggle to get the case conceptualization and the strategic plan. Then they ask themselves. "What do I do now?" Going from the abstractions to the actions is not always clear. The Practice of Rational Emotive Behavior Therapy represents a compilation of years of theoretical and clinical insights distilled into a specific theory of disturbance and therapy and deductions for specific clinical strategies and techniques....The structure of this book focuses on an explication of the theory, a chapter on basic practice, and a chapter on an in depth case study. A detailed chapter follows on the practice of individual psychotherapy. Although the book is not broken into sections, the next four chapters represent a real treasure. The authors focus on using REBT in couples, family, group, and marathons sessions. Doing REBT with one person is difficult to learn. Once the clinician adds more people to the room with different and sometimes competing agendas things get more complicated. These chapters will not only help the novice clinician but also the experienced REBT therapists work better in these types of sessions.

So, consider yourself lucky for having picked up this book. Reading it will help many people get better." - From the Foreword by Raymond DiGiuseppe, PhD, ScD, Director of Professional Education, Albert Ellis Institute; Professor and Chair, Department of Psychology, St. John's University This edition, involving a unique collaboration between Albert Ellis and the world's greatest Ellis scholar, Windy Dryden, modernizes Ellis's pioneering theories. The book begins with an explanation of rational emotive behavior therapy as a general treatment model and then addresses different treatment modalities, including individual, couple, family, and sex therapy. The authors have added material new since the book's original edition on teaching the principles of unconditional self-acceptance in a structured group setting. With extensive use of actual case examples to illustrate each of the different settings, and a new brand new foreword by Raymond DiGiuseppe that sets the book into its 21st-century context.

Every therapist feels stuck at some point. Dr. Peebles offers ways of working with patients that clear openings for growth inside those stuck-places. When Psychotherapy Feels Stuck integrates wisdom from multiple theoretical schools. It balances explicit, systematized frameworks for thinking with sensory-based metaphors. Chapters interweave empirical research with clinical vignettes to describe the power of language choices, tolerating not-knowing, risking relationship, and creating meaning. Therapists from all theoretical backgrounds and experience levels will find something unexpected here that sparks hope and a fresh take when feeling stuck.

"...[This book contains] invaluable material for the child therapist with varied theoretical backgrounds to more confidently apply EMDR to children." -- Frances Klaff, for Journal of EMDR Practice and Research, Volume 3, Number 3, 2009 In this book the authors present an overview of how therapists can get started in conceptualizing psychotherapy with Eye Movement Desensitization and Reprocessing (EMDR) methodology through Adaptive Information Processing (AIP) theory. The focus of the book is to teach therapists to effectively use the entire EMDR protocol with young children. The first chapter provides a comprehensive overview of how to get started with EMDR after completing basic training. The book continues with chapters that detail the basic skills in using EMDR with children and then transitions to more advanced skills in using EMDR with children with specific diagnosis and presenting issues. They follow with a chapter summarizing the published evidence to date supporting the practice of EMDR with children. Data is then incorporated into a chapter summarizing their research on EMDR with young children in order to provide evidence of therapists' ability to adhere to the EMDR protocol with children, and to document their research findings about training therapists to use EMDR with children. Finally, they conclude the book with goals for the future of EMDR with children while encouraging therapists to consider conducting research in order to compel the practice of EMDR with children into the mainstream of child psychotherapy. It is a major task of the book to inspire therapists to begin thinking about conducting research and how important research is to therapists in order to validate and advance the practice of psychotherapy. In the end, the most significant goal of this book is to provide best practice for children who are in need of expert psychotherapy in order to change the trajectory of their lives. The hope is to provide guidance and support to therapists in order to launch them in their practice of EMDR. This is the art of treating children with EMDR.
