Many factors affect treatment options for children and adolescents with mental health problems, including age, severity of symptoms, financial and time constraints, and access to qualified professionals. With the limitations of managed care plans and the shrinking pool of pediatric psychiatrists, the trend is toward pediatricians prescribing psychotropic medicines. Pharmacologically trained psychologists can offer valuable assistance to pediatricians caught in this predicament. Tackling fundamental questions of when to treat as well as when and why to refer young patients, the *Pediatricians and Pharmacologically Trained Psychologists* examines commonly occurring pediatric conditions requiring joint treatment; reviews theoretical models of consultation and collaboration; and spotlights professional issues typically arising from these team efforts. With pertinent clarity and detail, this volume offers in-depth discussion in these key areas: Collaborative treatment of mental health conditions, including mood, disruptive, anxiety, and eating disorders. Collaborative treatment of medical conditions, focusing on gastrointestinal disorders and diabetes. Changing clinical procedures in states that have enacted prescriptive authority for psychologists. Expanding roles for pharmacologically trained psychologists practicing in states that have not enacted

prescriptive authority for psychologists. Medical psychology in the pediatric hospital. Integrative care in rural settings and on the reservation. The collaborative future: brain marker technology, training paradigms, and more. Pediatricians and Pharmacologically Trained Psychologists is a must-have reference for a broad range of researchers, professionals, and graduate students, including psychologists, pediatricians and other child mental health clinicians as well as nonphysician prescribers, such as nurses, physician assistants, and pharmacists.

This exhaustively comprehensive edition of the classic Bonica's Management of Pain, first published 65 years ago, expertly combines the scientific underpinnings of pain with clinical management. Completely revised, it discusses a wide variety of pain conditions—including neuropathic pain, pain due to cancer, and acute pain situations—for adults as well as children. An international group of the foremost experts provides comprehensive, current, clinically oriented coverage of the entire field. The contributors describe contemporary clinical practice and summarize the evidence that guides clinical practice. Howard S. Becker is a leading contemporary sociologist who interprets society as collective action and sociology, therefore, as the study of collective action. This volume explores the theory and methods necessary to study collective action and social interaction. Becker includes

most of his work on theory and method that has not previously appeared in book form. It reflects his unique way of thinking about and studying society. The first part of the book treats methodological problems as problems of social interaction and lists a series of research problems requiring analytic attention. The second part illustrates Becker's approach through full reports on two of his major research projects. Four theoretical statements on how people change comprise the third part, and the fourth part includes important contributions to the study of deviance. These essays illustrate the need to study deviance as part of the general study of society, not as an isolated specialty. *Sociological Work* is an important statement of the distinctive theoretical and methodological views associated with the Chicago School of Sociology; it shows a deep concern with the first-hand study of processes and human consequences of collective action and interaction. This illuminating volume is an engaging introduction to some of the issues of importance to sociologists and those interested in the studies of collective action and deviance, and it is well adapted to use in courses in these areas.
